<sup>1</sup> CSR, Incorporated, operates the Alcohol Epidemiologic Data System (AEDS) under Contract No. HHSN275201800004C for the National Institute on Alcohol Abuse and Alcoholism (NIAAA). Dr. Michael E. Hilton (Division of Epidemiology and Prevention Research) serves as the NIAAA Contracting Officer's Representative on the contract.

(Blank page)

## HIGHLIGHTS

This surveillance report, prepared by the Alcohol Epidemiologic Data System (AEDS), National Institute on Alcohol Abuse and Alcoholism (NIAAA), presents data on underage drinking among youth ages 12–20 for 1991–2019. This is the eighth of a series of reports to be published every few years on underage drinking and related attitudes and risk behaviors. Data for this series are compiled from three separate nationally representative surveys: the National Survey on Drug Use and Health (NSDUH), the Monitoring the Future (MTF) survey, and the Youth Risk Behavior Survey (YRBS). Note that beginning with the 2015 NSDUH and 2017 YRBS, the threshold for female binge drinking was changed to consumption of 4 or more drinks (from 5 or more drinks) on an occasion or in a row in the past 30 days. The following are highlights of trends from 1991 through 2019.

### Prevalence of Use

- Although there are marked differences in absolute values of estimates, the trends across all three survey data sources show an overall decline in the prevalence of alcohol consumption in the past 30 days between 1991 and 2019. In 2019, 18.7 percent of youth ages 12–20 reported consuming alcohol in the past 30 days (NSDUH).
- Overall, the rate of decline in the prevalence of past-30-day alcohol consumption is greater in males than in females in the last few years. The sex-specific trends for ages 12–20 converged in 2015, and the prevalence for females (20.2%) exceeded that for males (17.2%) in 2019 (NSDUH).
- Throughout this period, rates of underage drinking remained highest among non-Hispanic whites, followed by Hispanics and non-Hispanic blacks. Rates were also higher among youth ages 12–20 not enrolled in school as compared with those enrolled in school (NSDUH), although rates among full-time or part-time college students ages 18–20 remained higher than among their same-age peers not enrolled in college (data not shown).

### Drinking Patterns

- The median age of initiation of drinking alcohol has increased from 13.65 years in 1991–1993 to 14.87 years in 2017–2019 (NSDUH). In addition, there has been a gradual decline in the proportion of youth reporting initiating drinking at age 12 or younger (NSDUH, YRBS).
- Over the course of the study period, males have generally maintained higher average frequency, quantity, and volume of consumption in the past 30 days than females. In 2017–2019, youth drinkers ages 12–20 reported drinking on an average of 4.44 days in the past 30 days. They consumed an average of 3.79 drinks on the days that they drank. Their average total volume of consumption was 20.7 drinks in the past 30 days (NSDUH).
- According to NSDUH, a household-based survey, overall rates of binge drinking increased between 1993 and 2001, from 12.1 to 18.6 percent, but have trended down to 10.6 percent in 2019. Data from the secondary school-based surveys (MTF and YRBS), by contrast, show an overall decline in binge drinking rates; the recent downward trends appear to have started in 1999 (MTF) and possibly as early as 1997 (YRBS). Persistent gaps in binge drinking rates between males and females are observed over time prior to 2016 but have narrowed (MTF) or even reversed (NSDUH, YRBS) by 2019. Despite an overall decrease in all binge drinking, the rate of decline for extreme binge (high-intensity) drinking (10+, 15+ drinks in a row) has been slower than for traditional binge drinking (5+ drinks in a row) (MTF).

### Alcohol-Related Attitudes

- The percentages of youth who strongly disapprove of others regularly consuming alcohol or binge drinking and who consider regular or binge drinking a great risk (MTF) show a declining trend during the 1990s, particularly in the early 1990s. The trend was reversed in the 2000s, showing a gradual increase for ten years or so. However, the percentages among females have started to decline since 2011. Although the *Healthy People 2020* target for binge drinking was met by 2019, the attitudes toward alcohol harms, which are more relevant for prevention purposes, are still below the target (U.S. Department of Health and Human Services n.d.-a).

### Alcohol-Related Risk Behaviors

- Between 1991 and 2019, trends from the YRBS show an overall decline in the prevalence of driving while under the influence of alcohol among secondary school youth, and similar downward trends are observed in the NSDUH data after 2002. The NSDUH data show consistently higher prevalence but a more precipitous decline from 2002–2004 to 2017–2019 among non-Hispanic whites (11.9% to 2.9%) compared to Hispanics (7.5% to 2.0%) and non-Hispanic blacks (4.6% to 1.1%) for both sexes.

## INTRODUCTION

This surveillance report on underage drinking is one of a series of reports published to monitor trends in alcohol consumption and alcohol-related morbidity and mortality. These reports are prepared by the Alcohol Epidemiologic Data System (AEDS), and Division of Epidemiology and Prevention Research, National Institute on Alcohol Abuse and Alcoholism (NIAAA), and are intended to be useful to researchers, planners, policymakers, and other professionals interested in alcohol misuse by young people and its associated consequences. In 2007, the *Surgeon General's Call to Action to Prevent and Reduce Underage Drinking* brought renewed focus to this issue. The *Call to Action* reviewed the risk factors and outcomes associated with underage drinking, presented a developmental framework for understanding and addressing underage drinking, and identified six goals for the Nation to address the problem of underage drinking. This surveillance report responds to Goal 5, "Work to improve public health surveillance on underage drinking and on population-based risk factors for this behavior" (U.S. Department of Health and Human Services 2007, p. 37). The data presented herein also are essential in assessing changes toward meeting one of the Nation's health behavior goals to reduce misuse of drugs and alcohol (e.g., underage drinking) as stated in *Healthy People 2030* (U.S. Department of Health and Human Services n.d.-b). This is the eighth surveillance report on underage drinking developed by NIAAA. AEDS will issue follow-up reports on this topic every few years.

Rates of alcohol consumption among underage youth are a cause for concern (National Research Council and Institute of Medicine 2004). In this report, 18.7 percent of 12- to 20-year-olds reported drinking alcohol in the past 30 days (2019 National Survey of Drug Use and Health [NSDUH]). This is a decrease from the rate of 33.4 percent nearly three decades earlier (1991 National Household

Survey on Drug Abuse [NHSDA]), although changes in survey methodology preclude a direct comparison of these two estimates. In the United States, alcohol consumption begins early, with a median age of 14.87 years (2017–2019 NSDUH), and 15.0 percent of high school students reporting that they consumed their first drink of alcohol before age 13 (Centers for Disease Control and Prevention 2020). By the 12th grade, 14.4 percent of adolescents report binge drinking (consuming 5 or more drinks in a row within the past 2 weeks) (2019 Monitoring the Future [MTF]).

Underage drinking is associated with an array of social, emotional, behavioral, and health problems (Committee on Substance Abuse 2010; Masten et al. 2009; Office of Juvenile Justice and Delinquency Prevention 2012; U.S. Department of Health and Human Services 2018). For example, alcohol use caused youth to behave in ways they later regretted, interfered with their ability to think clearly, or caused them to drive unsafely. Youth who drink and drive are at increased risk of involvement in accidents because of the duality of alcohol-related impairment and relative driving inexperience (Peck et al. 2008). Underage drinking is associated with not only driving after consuming alcohol but also riding with a peer who has consumed alcohol (Li et al. 2018; Miller et al. 2007; O'Malley and Johnston 2013; Terry-McElrath et al. 2014; Vaca et al. 2020). When youth consume alcohol, they are more likely to engage in risky sexual behaviors, such as having unprotected sexual intercourse, having multiple partners, and being drunk or high during intercourse (Brookmeyer and Henrich 2009; Chernick et al. 2020; Nkansah-Amankra et al. 2011; Oshri et al. 2013; Scroggins et al. 2021; Seth et al. 2011; Storholm et al. 2018; Stueve and O'Donnell 2005). This puts them at risk of adverse consequences, such as sexual victimization (Basile et al. 2020; Champion et al. 2004; Thompson et al. 2012), unwanted pregnancy (Salas-Wright et al. 2015), and sexually transmitted infections (Chung et al.

2017; Cook et al. 2002; Khan et al. 2012). Adolescents under the influence of alcohol or with a history of drinking alcohol are also more likely to engage in violence, such as physical fighting and assault (Blitstein et al. 2005; Kedia et al. 2020; Kodjo et al. 2004; Salas-Wright et al. 2016; Swahn et al. 2004, 2013; Wells et al. 2004). Adolescent alcohol use disorder and alcohol intoxication while depressed increase the risk for suicidal behavior (Chatterji et al. 2004; Esposito-Smythers and Spirito 2004; Ganz and Sher 2009; McManama O'Brien et al. 2014; Schilling et al. 2009). Several studies have established a convincing link between youth alcohol use, particularly binge drinking, and illicit drug use (Esser et al. 2021; Jones et al. 2020; Miller et al. 2007; Siliquini et al. 2012), and identified distinct brain networks that predispose adolescents to risky behaviors, such as experimenting with drugs and alcohol (Hammerslag and Gulley 2016; Jacobus and Tapert 2013; Lees et al. 2019; Squeglia and Gray 2016; Whelan et al. 2012). In 2017, among youth ages 12 to 17 who were heavy drinkers (i.e., having consumed 5 or more drinks for males or 4 or more drinks for females on the same occasion on each of 5 or more days in the past 30 days), 74.2 percent were current illicit drug users and 69.4 percent were current marijuana users. By contrast, the respective percentages among youth who were not current alcohol users were 4.3 percent for current illicit drug use and 3.1 percent for current marijuana use (Center for Behavioral Health Statistics and Quality 2018).

Despite declines in overall alcohol use among teens for nearly three decades, Miech and colleagues (2020) found that among 12th graders surveyed in 2019, 14.4 percent reported consuming 5 or more alcoholic drinks, 5.3 percent reported consuming 10 or more drinks, and 3.2 percent reported consuming 15 or more drinks in a row at least once in the last 2 weeks. This type of extreme binge drinking in particular puts youth at risk for injuries, alcohol-related suicide, homicide, sexual assault, alcohol

poisoning, motor vehicle crashes, other drug use, alcohol use disorder, memory blackouts, altered brain development, poor academic performance (Evans-Polce et al. 2017; Hingson and White 2013, 2014; Hingson and Zha 2018; Patrick and Azar 2018; White and Hingson 2013; White et al. 2011), and adverse effects on new verbal learning (Carbia et al. 2017; Lees et al. 2020; Nguyen-Louie et al. 2016).

Adolescents are particularly sensitive to the neurotoxic effects of alcohol because their brain development is not fully complete. Alcohol consumption in adolescence disrupts normal brain maturation in several regions (e.g., prefrontal cortex, hippocampus, and cerebellum), resulting in neurobehavioral and cognitive deficits (Courtney et al. 2019; Cserveska and Nagel 2016; Guerri and Pascual 2010; Jacobus and Tapert 2013; López-Caneda et al. 2019; Pascual et al. 2018; Spear 2014, 2016, 2018; Squeglia et al. 2009, 2014a, 2014b; Sullivan et al. 2020; Welch et al. 2013; White and Swartzwelder 2005; Zhao et al. 2020). Neuroimaging, neurophysiological, and neuropsychological studies show that deviations from the expected developmental trajectories in key frontal and limbic regions and functional brain networks predispose youth to binge drinking. This further exacerbates disruptions in adolescent brain development through structural, functional, and cognitive aberrations, such as accelerated gray matter volume reductions in cortical and subcortical regions; attenuated growth in white matter structures associated with axonal myelination; and alterations in brain activation for cognitive control (executive functioning) tasks involving working memory, inhibition, and decision making (Carbia et al. 2018; Feldstein Ewing et al. 2014; Jones et al. 2018; Lees et al. 2019, 2020; Müller-Oehring et al. 2018; Pfefferbaum et al. 2018; Silveira et al. 2020; Squeglia et al. 2017). Results from preclinical studies have shown long-lasting adverse effects of adolescent alcohol exposures on brain structure and function, neurogenesis, and cognitive and

neurobehavioral consequences in adulthood through neuroimmune, neurotrophic, epigenetic gene expression, and neurobiological alterations at the molecular, cellular, and physiological levels (Coleman et al. 2014; Crews et al. 2016, 2019; Fernandez et al. 2016; Gass et al. 2014; Gilpin et al. 2012; Hiller-Sturmhöfel and Spear 2018; Logrip et al. 2013; Macht et al. 2020; Semenova 2012; Spear 2016; Taffe et al. 2010; Vetro et al. 2016).

A large body of literature has found that age at initiation of drinking (i.e., the first consumption of a full drink) is associated with future drinking patterns and alcohol-related risk behaviors (Blomeyer et al. 2013; Buchmann et al. 2009; Caetano et al. 2014; Dawson et al. 2007, 2008; Deutsch et al. 2013; Faden 2006; Guttmanova et al. 2011; Hermos et al. 2008; Hingson and Zha 2009; Hingson et al. 2002, 2006; Holligan et al. 2019; Kim et al. 2017; Lee et al. 2012; Liang and Chikritzhs 2013; McBride et al. 2014; Stueve and O'Donnell 2005; Swahn et al. 2008, 2013; Warner and White 2003; Wells et al. 2004; York et al. 2004; Young et al. 2006; Zakrajsek and Shope 2006). For example, early age at drinking initiation is associated with past-year drinking (Lee et al. 2012), frequency and quantity of drinking (Aiken et al. 2018; Deutsch et al. 2013), volume of drinking (Caetano et al. 2014), binge drinking (Aiken et al. 2018; Buchmann et al. 2009; Caetano et al. 2014; Liang and Chikritzhs 2013), getting drunk and high, self-reports of substance use interfering with life activities (Stueve and O'Donnell 2005), alcohol abuse and dependence later in life (Caetano et al. 2014; Caamano-Isorna et al. 2020; Dawson et al. 2008; Grant et al. 2001; Guttmanova et al. 2011; York et al. 2004), prescription drug misuse (Arterberry et al. 2016; Hermos et al. 2008), comorbid reports of physical fighting and suicide attempts (Swahn et al. 2013), and dating violence victimization and perpetration (Swahn et al. 2008; Waterman et al. 2019). Moreover, age at initiation of drinking is

associated with driving after drinking and being involved in drinking-related vehicle crashes (Hingson et al. 2002), risky driving and alcohol-related driving offenses (Zakrajsek and Shope 2006), unintentionally injuring oneself and others when under the influence of alcohol (Hingson and Zha 2009), and increased risk for alcohol-related neurocognitive vulnerabilities and poor neuropsychological functioning (Nguyen-Louie et al. 2017).

## DATA SOURCES

Data for this report are drawn from three sources: the NSDUH, the MTF survey, and the YRBS.

### National Survey on Drug Use and Health

The NSDUH (formerly the NHSDA) is conducted by the Substance Abuse and Mental Health Services Administration (SAMHSA). The nationally representative survey was initiated in 1971 and has been administered annually since 1991. The survey is administered at the household level through in-person interviews. Since 1999, computer-assisted interviewing methods have been used, including audio computer-assisted self-interviewing for selected survey components. In this same year, the survey sample was expanded to allow for computation of State-specific prevalence estimates. In 2002, the survey was given its new name (NSDUH), and additional methodological changes were made that affected some prevalence rates and represented a new baseline. These included a \$30 incentive to all respondents that resulted in substantial increases in response rates and improved data quality-control measures. In 2002 and 2011, new population data from the 2000 and 2010 decennial Censuses, respectively, became available for use in NSDUH sample weighting procedures. Unlike previous designs that divide the sample approximately equally among three age groups—12 to 17 years, 18 to 25 years, and 26 years or older—the 2014/2015 design places

more sample (50%) in the 26 years or older age group to provide more accurate estimates for the aging drug use population. The partial questionnaire redesign in 2015 changes the threshold of binge alcohol use from 5 or more drinks for both sexes to 5 or more drinks for males and 4 or more drinks for females on an occasion in the past 30 days. All respondents ages 12–20 years from the NSDUH public-use data were selected for this surveillance report.

### **Monitoring the Future**

The MTF survey is funded by the National Institute on Drug Abuse and conducted annually by the University of Michigan Institute for Social Research. The MTF survey was initiated in 1975 among 12th graders only, and 8th and 10th graders were added in 1991, providing a nationally representative sample of secondary-school students in those grades. The survey is administered in school to a sample of students enrolled in public and private secondary schools. Since 1976, a random sample of 12th graders has been followed biannually through a self-administered mail-back questionnaire. The MTF survey defines extreme binge (high-intensity) drinking as having 10 or more or 15 or more drinks in a row in the past 2 weeks and introduced this measure in the 12th-grader surveys in 2005. For this surveillance report, all respondents from the 8th, 10th, and 12th grade samples were included in the analyses.

### **Youth Risk Behavior Survey**

The YRBS is conducted by the Centers for Disease Control and Prevention and administered every 2 years to students enrolled in public or private schools in grades 9 through 12. Initiated in 1991, the survey provides a nationally representative sample of youth enrolled in high school. Beginning in 2017, YRBS changed the threshold of binge alcohol use from 5 or more drinks for both sexes to 5 or more drinks for males and 4 or more drinks for females in a row in the past 30 days. All

respondents from the biannual surveys were included in this surveillance report.

All three sources of data for this surveillance report are nationally representative repeated cross-sectional surveys that provide data on youth alcohol consumption and related risk behaviors. As described above, there are also important differences among the three surveys related to the ages of youth sampled, the timing of the survey, the setting of survey administration and consequent type of youth sampled and level of anonymity involved, and the wording of the questions. Specifications of the three surveys are summarized in the Appendix and briefly reviewed here.

### **Age Groups**

Whereas NSDUH collects information on youth as young as 12, the YRBS collects information from youth in grades 9 through 12, and MTF skips grades, surveying youth in 8th, 10th, and 12th grades.

### **Periodicity**

Both NSDUH and MTF are administered annually, whereas the YRBS collects data every 2 years.

### **Survey Administration Location**

As school-based surveys, MTF and YRBS collect data only on youth currently enrolled in school. Data from NSDUH cover both youth enrolled in school and those not enrolled. The different settings of the survey administration contribute to different levels of anonymity. For example, on the one hand, youth may feel comfortable about revealing sensitive information, such as alcohol and other drug use, in the more anonymous school setting than at home (Faden et al. 2004; Fendrich and Johnson 2001; Fowler and Stringfellow 2001; Sudman 2001). On the other hand, youth may also respond to perceived peer influence in the school setting and thus may exaggerate certain risk behaviors in their self-reports; such effects are hard to assess (Fowler and Stringfellow

2001; Harrison 2001). Therefore, although alcohol consumption rates may be under-reported in the NSDUH, they may be inflated in the MTF and YRBS datasets.

### Question Wording

The three surveys differ in the number and wording of questions on alcohol consumption and on related risk behaviors. The reference period for all surveys is generally the past 30 days. However, MTF asks about binge drinking in the past 2 weeks, whereas the other surveys ask about it in the past month. NSDUH and YRBS ask about age at initiation of drinking, but MTF asks about grade at initiation of drinking. All surveys ask about driving under the influence, but MTF asks only the 12th graders. MTF frames the question around whether the respondent has ever received a moving violation ticket or warning after drinking alcohol. Only in one of the six questionnaire forms does MTF ask 12th graders the questions about driving after drinking alcohol or having 5 or more drinks in a row. The Appendix specifies the wording used in each survey for the indicators included in the report. Data tables and figures are not provided for all questions listed.

## METHODS

This surveillance report tracks alcohol consumption and associated behaviors among youth ages 12–20 years old. Age 12 is the youngest age for which nationally representative data are available (from NSDUH). Age 20 is the last year before youth are legally allowed to drink alcohol. Findings are presented for 1991 through 2019, the latest year for which data are available for this report from all three data sources. For new indicators collected only in the past several years, all available data are reported (i.e., detailed data by race, data on selected alcohol-related risk behaviors).

### Definitions

The report presents trend data on different categories of indicators for alcohol consumption

and related risk behaviors, including prevalence of use, pattern of use, alcohol-related attitudes, and alcohol-related risk behaviors. Definitions of measures used, including descriptions of calculated measures, are provided below:

- Prevalence of use
  - Any drinking of alcohol in the past 30 days (more than just a sip or two from a drink)
- Initiation of drinking
  - Age at first use of alcohol
  - Initiating drinking at age 12 years or younger
- Frequency of use
  - Number of drinking days in the past 30 days
- Quantity of use
  - Usual number of drinks on drinking days in the past 30 days
- Volume of use
  - Total number of drinks in the past 30 days, computed as frequency multiplied by quantity in the past 30 days
- Binge drinking
  - Any drinking of 5 or more drinks on an occasion (in a row) in the past 30 days (for NSDUH 1991–2014 and YRBS 1991–2015) or in the past 2 weeks (for MTF); any drinking of 5 or more drinks for males and 4 or more drinks for females on an occasion in the past 30 days (for NSDUH 2015–2019 and YRBS 2017–2019)
  - Frequency of drinking 5 or more drinks (for NSDUH 1991–2014) or 5 or more drinks for males and 4 or more drinks for females (for NSDUH 2015–2019) on an occasion in the past 30 days
  - Frequency of drinking 5 or more drinks (for NSDUH 1991–2014) or 5 or more drinks for males and 4 or more drinks for females (for NSDUH 2015–2019) on an occasion in the past 30 days, categorized as 0 days, 1–2 days, 3–4 days, and 5 or more days

- Extreme binge (high-intensity) drinking (i.e., twice or three times as much as the traditional 5-drink cutoff)
  - Any drinking of 10 or more drinks in a row in the past 2 weeks
  - Any drinking of 15 or more drinks in a row in the past 2 weeks
- Drunkenness
  - Having been drunk or very high from drinking in the past 30 days
- Alcohol-related attitudes
  - Disapproval of consuming 1 or 2 drinks nearly every day, categorized as don't disapprove, disapprove, and strongly disapprove
  - Disapproval of consuming 5 or more drinks once or twice each weekend, categorized as don't disapprove, disapprove, and strongly disapprove
  - Perception of risk of harm for those drinking 1 or 2 drinks nearly every day, categorized as no risk, slight risk, moderate risk, and great risk
  - Perception of risk of harm for those drinking 5 or more drinks once or twice each weekend, categorized as no risk, slight risk, moderate risk, and great risk
- Alcohol-related risk behaviors
  - Driving after drinking alcohol in the past 30 days
  - Riding in a car driven by someone who had been drinking in the past 30 days
  - Drinking alcohol or using drugs before last sexual intercourse
  - Drinking and activity with risk of physical danger in the past 12 months
  - Drinking and getting into legal trouble in the past 12 months
  - Problems with family or friends caused by drinking in the past 12 months

## **Analyses**

Analyses in this report are mainly descriptive. The report examines a wide range of relevant data over multiple years and discusses observed changes without reference to

more complicated statistical analyses of trends, such as those used by Faden and Fay (2004) and Faden (2006). The exceptions are Figures 1-1, 1-2, 6-1, and 6-2, where the trends in prevalence of drinking and binge drinking are represented by segmented lines that were fitted using joinpoint (piecewise) regression models (Kim et al. 2000). These lines indicate significant changes in the trends over time.

For different analyses, data are presented by sex, race (non-Hispanic white and non-Hispanic black) and Hispanic origin, age or current school grade, and school enrollment status. More detailed data by race and Hispanic origin (non-Hispanic white, non-Hispanic black, Native American/Alaska Native, Asian/Native Hawaiian Islander/Other Pacific Islander, Hispanic, more than one race) are presented in the tables for 1999–2019. To increase the stability of estimates, prevalence estimates by age are presented in age groupings in the tables, specifically ages 12–14, 15–17, and 18–20. In the figures, these prevalence estimates are shown by single age and grade. Three-year moving averages are used for tracking certain alcohol consumption measures to minimize data suppression problems for groups with small sample sizes (e.g., number of drinkers in the 12–14 age group) and to avoid large fluctuations in point estimates. For selected indicators, trend data from the three data sources are compared in separate graphs. Because of the large age span of the NSDUH and its inclusion of youth enrolled and not enrolled in school, more detailed analyses by demographic characteristics are presented for the NSDUH only. We present results from secondary data analysis for NSDUH and YRBS data, because publicly available reports on these surveys do not cover all the indicators, categories, and age groupings applicable to this report. When applicable estimates by grade are publicly available from MTF reports, we present them in tables to facilitate comparison across different surveys. We present our secondary analysis results based on public-use MTF data only when the

aggregate estimates are not publicly available elsewhere. Because some MTF questions are asked only of subsamples, we note in the MTF figures and tables when estimates are based on data from subsamples.

To ensure reliability of findings presented, all outlier values were censored. Specifically, cases with reported alcohol consumption of greater than 20 drinks per drinking day were truncated at 20 drinks on drinking days. Cases with missing values for an indicator of interest were excluded from analysis for that indicator.

To enable readers to assess the precision of the estimates provided, each estimate is accompanied by a value for the standard error of the estimate (labeled S.E. in the tables). Multiplying the standard error by 1.96 provides a margin of error above and below each estimate. This range defines a 95-percent confidence interval that implies that 95 percent of such calculated intervals over repeated independent sampling are expected to contain the true value being estimated. Estimates with very large standard errors can be extremely unreliable. The reliability of estimates ( $r$ ) was assessed using the relative standard error (RSE), computed as  $RSE = 100 \times (SE(r)/r)$ . Following the recommendations of the National Center for Health Statistics (Klein et al. 2002), estimates with  $RSE > 17.5$  percent were considered of low reliability and are marked in the tables with the symbol #.

## Limitations

Due to differences in sample populations (i.e., only school-enrolled youth vs. both enrolled and not enrolled youth; 12- to 20-year-olds for NSDUH vs. 8th, 10th, and 12th graders for MTF vs. 9th–12th graders for YRBS) and survey administration (i.e., in school vs. at home), comparisons among the three data sources should be made with caution. Numerous factors contribute to lower estimates of adolescent alcohol use in NSDUH than in MTF or YRBS and lower estimates in MTF than in YRBS, including interview privacy, survey focus, prominence of mentions of substance use,

procedures for obtaining parental permission, assurances of anonymity or confidentiality, placement and context of substance use questions in the interview, survey mode, and structure and wording of survey questions (SAMHSA 2012). Despite differences in prevalence estimates across surveys within a single year, it is possible to compare trends across years. For example, there are marked differences in absolute values of past-30-day alcohol consumption prevalence among findings from NSDUH, MTF, and YRBS; however, trend lines from all three surveys show a decrease in prevalence between 1997 and 2019.

Furthermore, NSDUH had a major change of design during this period. Close examination of the NSDUH data for past-30-day consumption shows a steep decrease in rates between 1998 and 1999 followed by an increase from 1999 to 2003. It is not clear if this is a real increase or an artifact of the 1999 methodological changes. The 2002 methodological changes—including the respondent incentive and the improved data collection quality-control measures—also may have resulted in higher self-reported substance use by respondents (SAMHSA 2003). Caution should be taken in comparing estimates from before and after 1999 as well as from before and after 2002. The major change in survey methodology of 1999 and the additional changes of 2002 are marked with shading in the graphs in this report. Beginning in 2015, the partial questionnaire redesign lowered the threshold of binge drinking for females from 5 or more drinks to 4 or more drinks in a row in the past 30 days and could potentially affect the trends by artificially inflating the prevalence estimates for females and for both sexes combined. This also applies to YRBS beginning in 2017. Prevalence estimates from NSDUH included in this report may differ slightly from those presented in reports issued by SAMHSA, as SAMHSA analysts use a restricted-use dataset for their analyses. The same is true with estimates generated from our secondary analysis of public-use MTF data.

Table 1-1 NSDUH: Prevalence of drinking in the past 30 days, by age, sex, and race/Hispanic origin, among 12- to 20-year-olds, United States, 1991–2019.....	39
Table 1-2 MTF: Prevalence of drinking in the past 30 days, by grade and sex, United States, 1991–2019 .....	48
Table 1-3 YRBS: Prevalence of drinking in the past 30 days, by grade and sex, United States, 1991–2019 .....	50
Table 2-1 NSDUH: Median age at first use of alcohol, by age, sex, and race/Hispanic origin, among ever drinkers ages 12–20, United States, 1991–2019 (based on 3-year moving averages).....	51
Table 2-2 NSDUH: Prevalence of initiating drinking at age 12 or younger, by sex, among ever drinkers ages 12–20, United States, 1991–2019.....	59
Table 2-3 YRBS: Prevalence of initiating drinking at age 12 or younger, by sex, among ever drinkers, United States, 1991–2019.....	60
Table 3 NSDUH: Mean frequency of drinking in the past 30 days, by age, sex, and race/ Hispanic origin, among current drinkers ages 12–20, United States, 1991–2019 (based on 3-year moving averages).....	61
Table 4 NSDUH: Mean quantity of drinking on drinking days in the past 30 days, by age, sex, and race/Hispanic origin, among current drinkers ages 12–20, United States, 1991–2019 (based on 3-year moving averages) .....	69
Table 5 NSDUH: Average total number of drinks in the past 30 days, by age, sex, and race/Hispanic origin, among current drinkers ages 12–20, United States, 1991–2019 (based on 3-year moving averages) .....	77
Table 6-1 NSDUH: Prevalence of binge drinking in the past 30 days, by age, sex, and race/Hispanic origin, among 12- to 20-year-olds, United States, 1991–2019 .....	85
Table 6-2 MTF: Prevalence of binge drinking in the past 2 weeks, by grade and sex, United States, 1991–2019.....	94
Table 6-3 YRBS: Prevalence of binge drinking in the past 30 days, by grade and sex, United States, 1991–2019.....	96
Table 6-4 NSDUH: Mean number of binge drinking days in the past 30 days, by age, sex, and race/Hispanic origin, among current drinkers ages 12–20, United States, 1991–2019 (based on 3-year moving averages) .....	97
Table 7 MTF: Prevalence of having been drunk or very high from drinking alcoholic beverages in the past 30 days, by grade and sex, United States, 1991–2019 .....	105
Table 8 NSDUH: Prevalence of driving a vehicle while under the influence of alcohol or in combination of illegal drugs in the past 12 months, by age, sex, and race/Hispanic origin, among 12- to 20-year-olds, United States, 1995–2019 (based on 3-year moving averages).....	107
<b>APPENDIX</b>	
Appendix A. Differences Among Survey Data Sources .....	115

**Figure 1-1.** Prevalence of drinking in the past 30 days, by sex, 1991–2019.

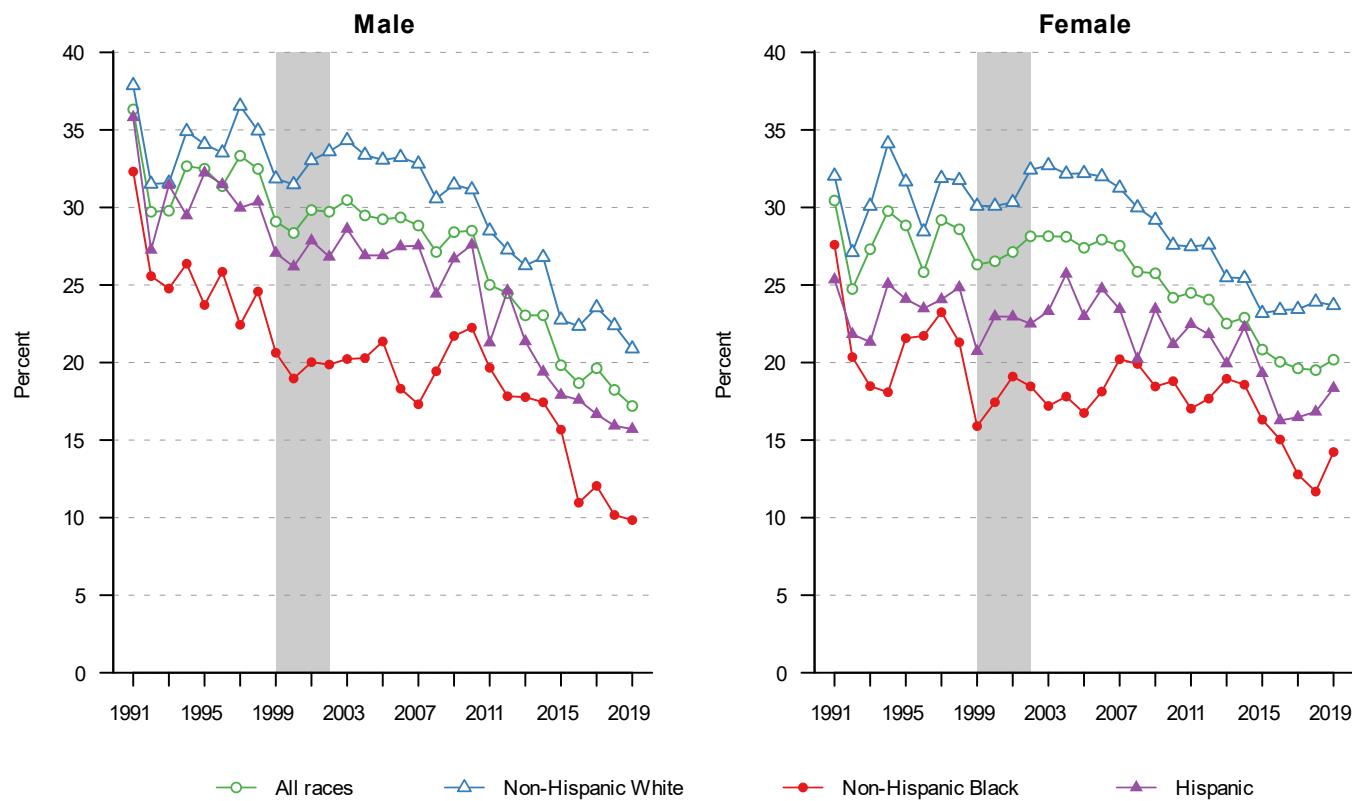

**Figure 1-2.** NSDUH: Prevalence of drinking in the past 30 days among 12- to 20-year-olds, by sex and age group, 1991–2019.

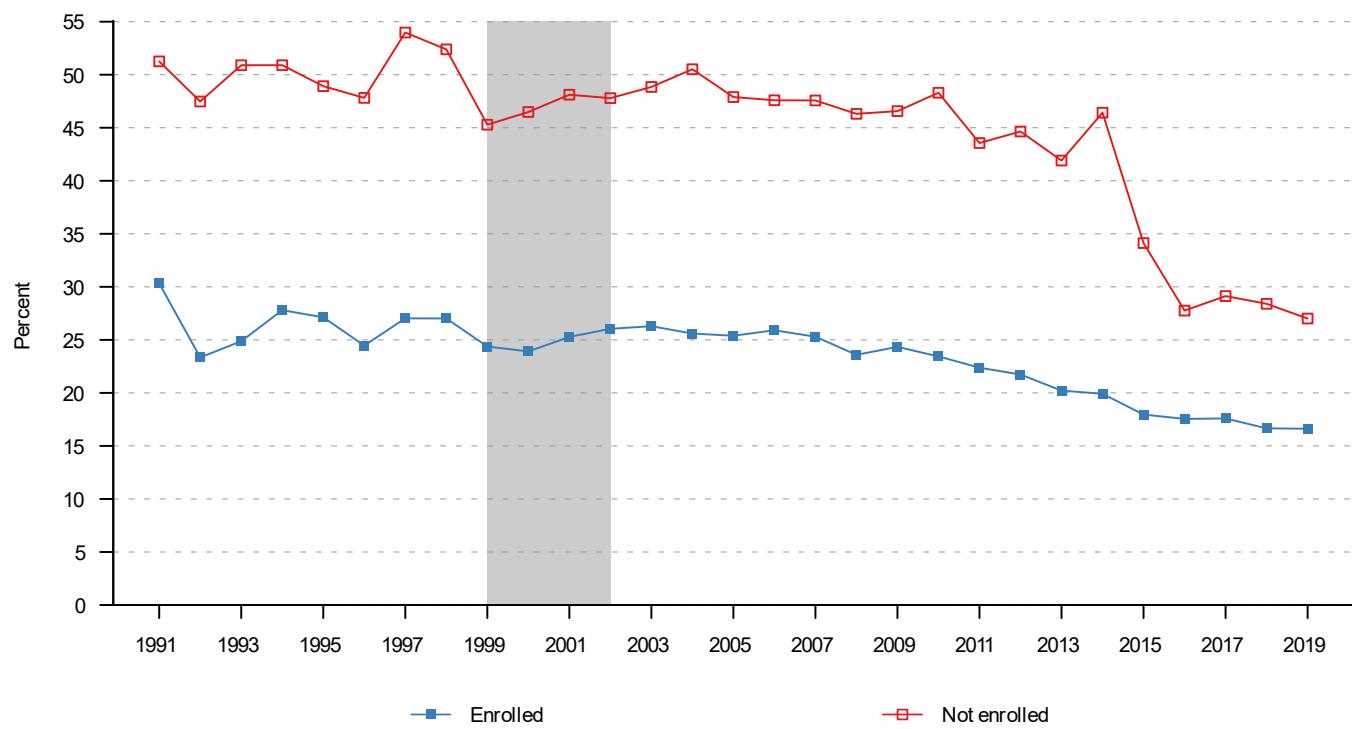

[Fitted trends result from joinpoint regression (see the methods section for detail).]  
 [Shaded areas mark the implementation of a major redesign to the NSDUH survey in 1999 and methodological changes in 2002.]

**Figure 1-3.** NSDUH: Prevalence of drinking in the past 30 days among 12- to 20-year-olds, by sex and race/Hispanic origin, 1991–2019.

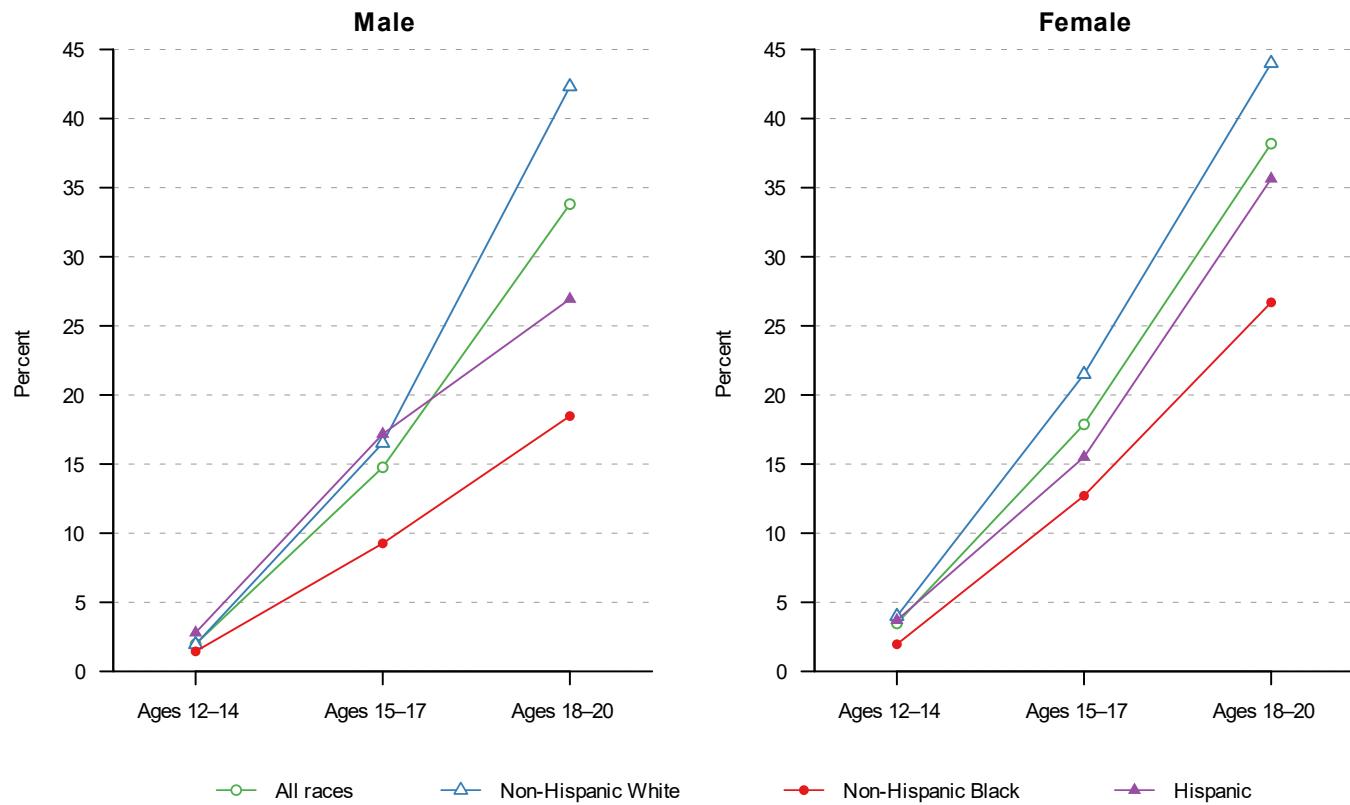

**Figure 1-4.** NSDUH: Prevalence of drinking in the past 30 days among 12- to 20-year-olds, by school enrollment status, 1991–2019.

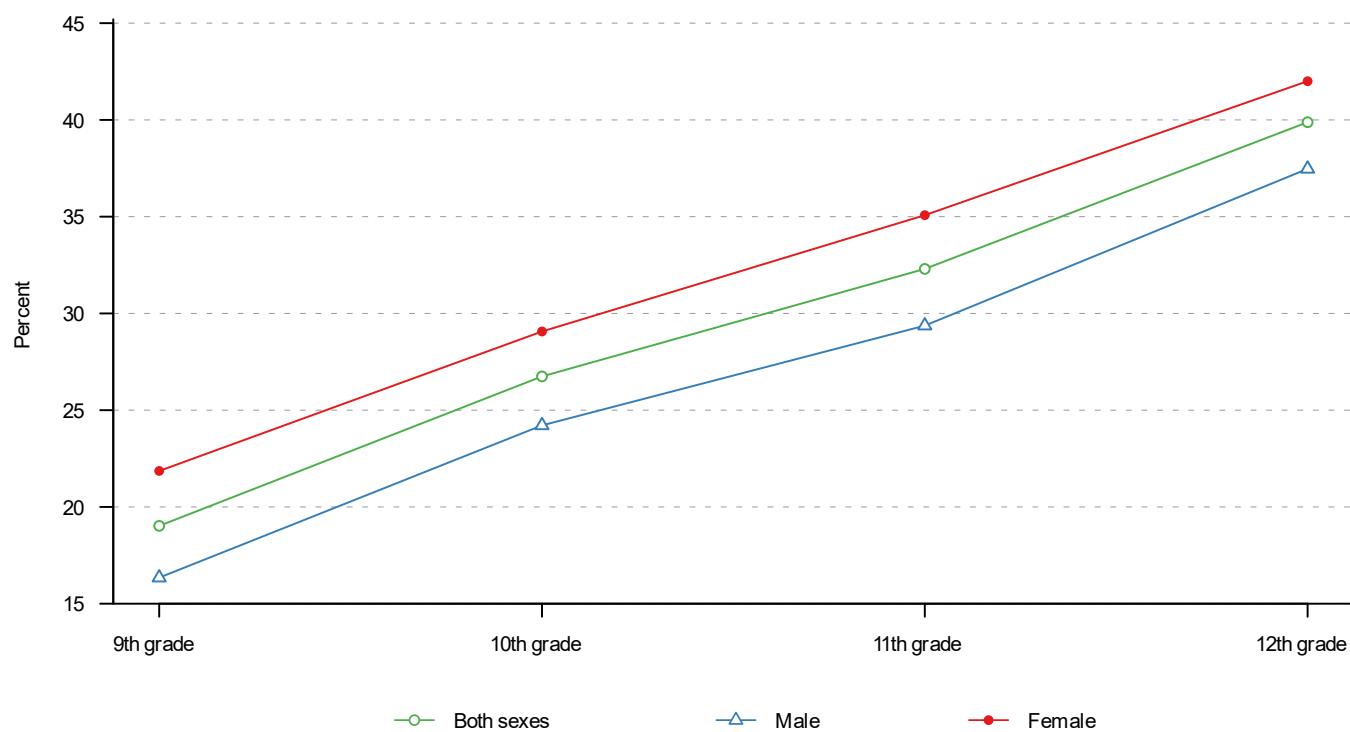

[Shaded areas mark the implementation of a major redesign to the NSDUH survey in 1999 and methodological changes in 2002.]

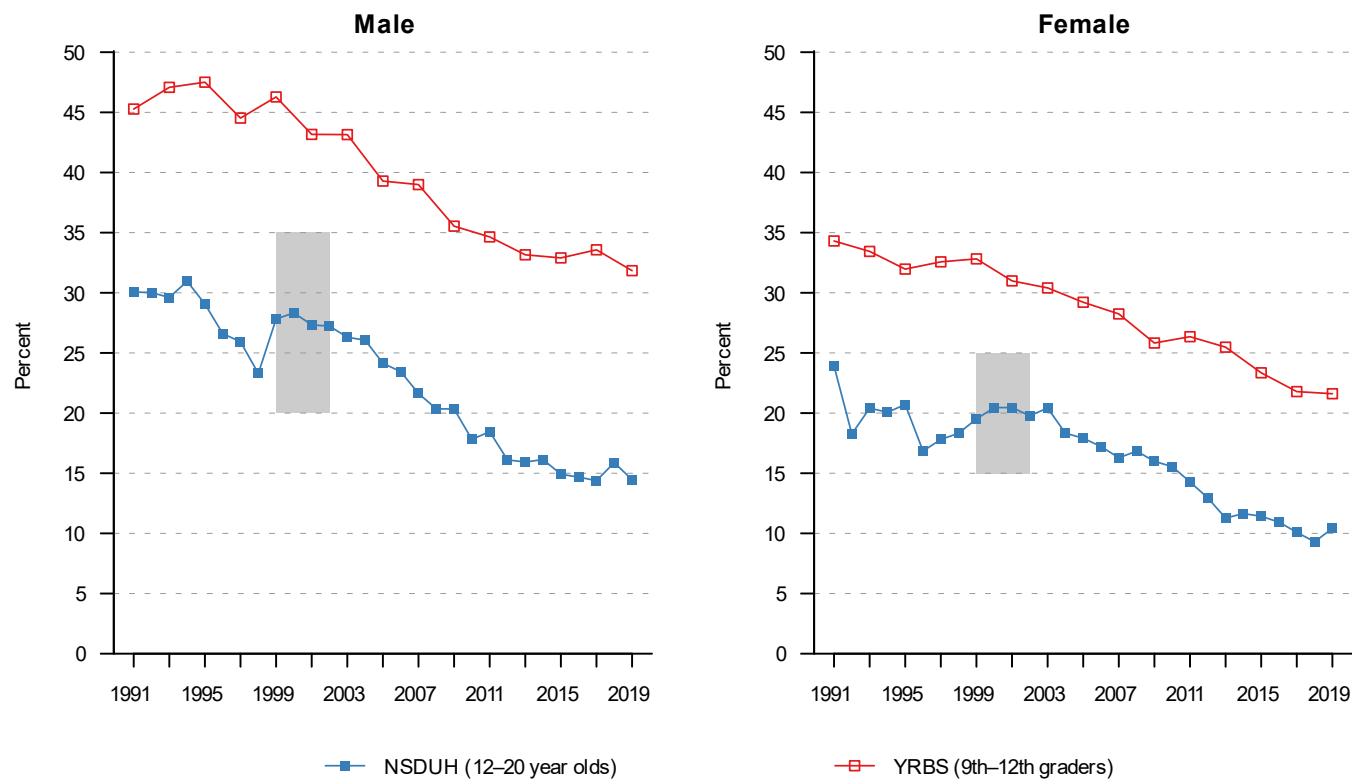

**Figure 1-5.** NSDUH: Prevalence of drinking in the past 30 days among 12- to 20-year-olds, by age, sex, and race/Hispanic origin, 2019.

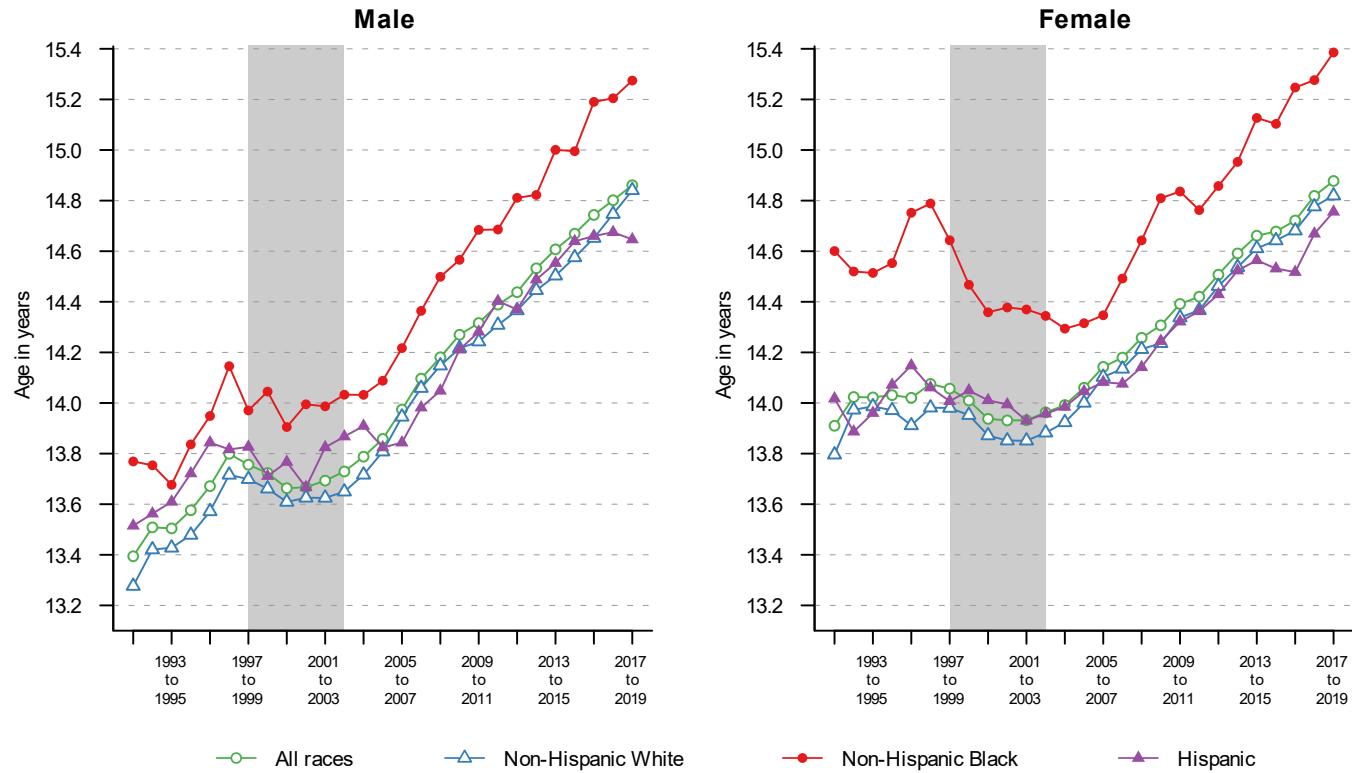

**Figure 1-6.** YRBS: Prevalence of drinking in the past 30 days, by grade and sex, 2019.

**Figure 2-1.** NSDUH and YRBS: Prevalence of initiating drinking at age 12 or younger, by sex, 1991–2019.

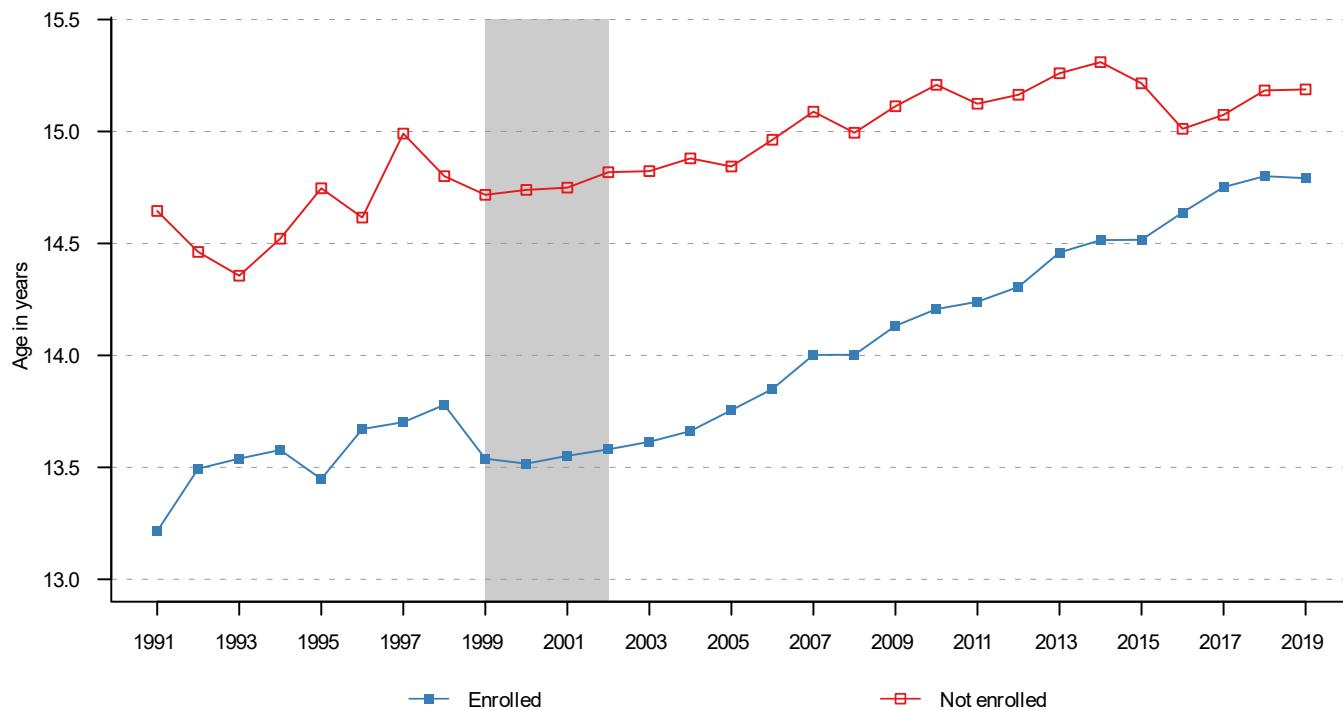

**Figure 2-2.** NSDUH: Median age at first use of alcohol among 12- to 20-year-olds, by sex and race/Hispanic origin, 1991–2019 (based on 3-year moving averages).

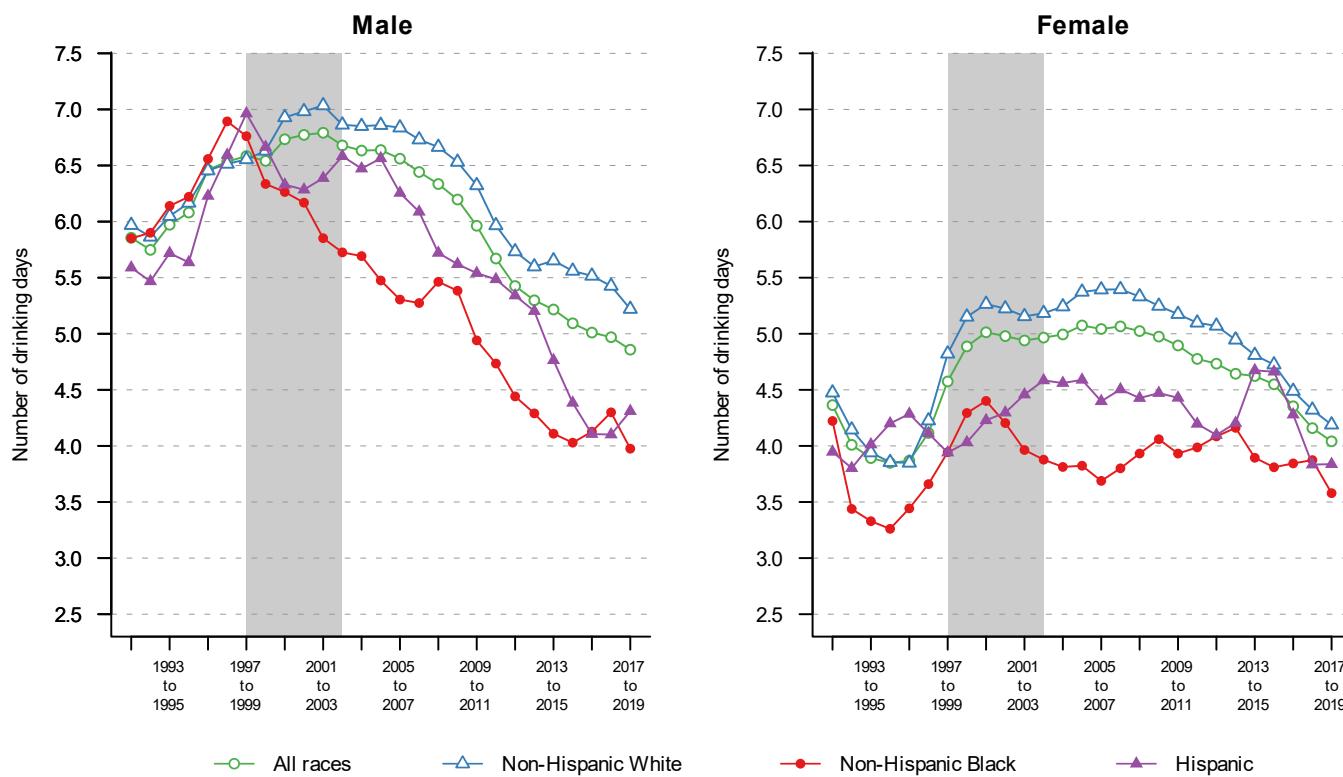

[Shaded areas mark the implementation of a major redesign to the NSDUH survey in 1999 and methodological changes in 2002.]

**Figure 2-3.** NSDUH: Median age at first use of alcohol among 12- to 20-year-olds, by school enrollment status, 1991–2019.

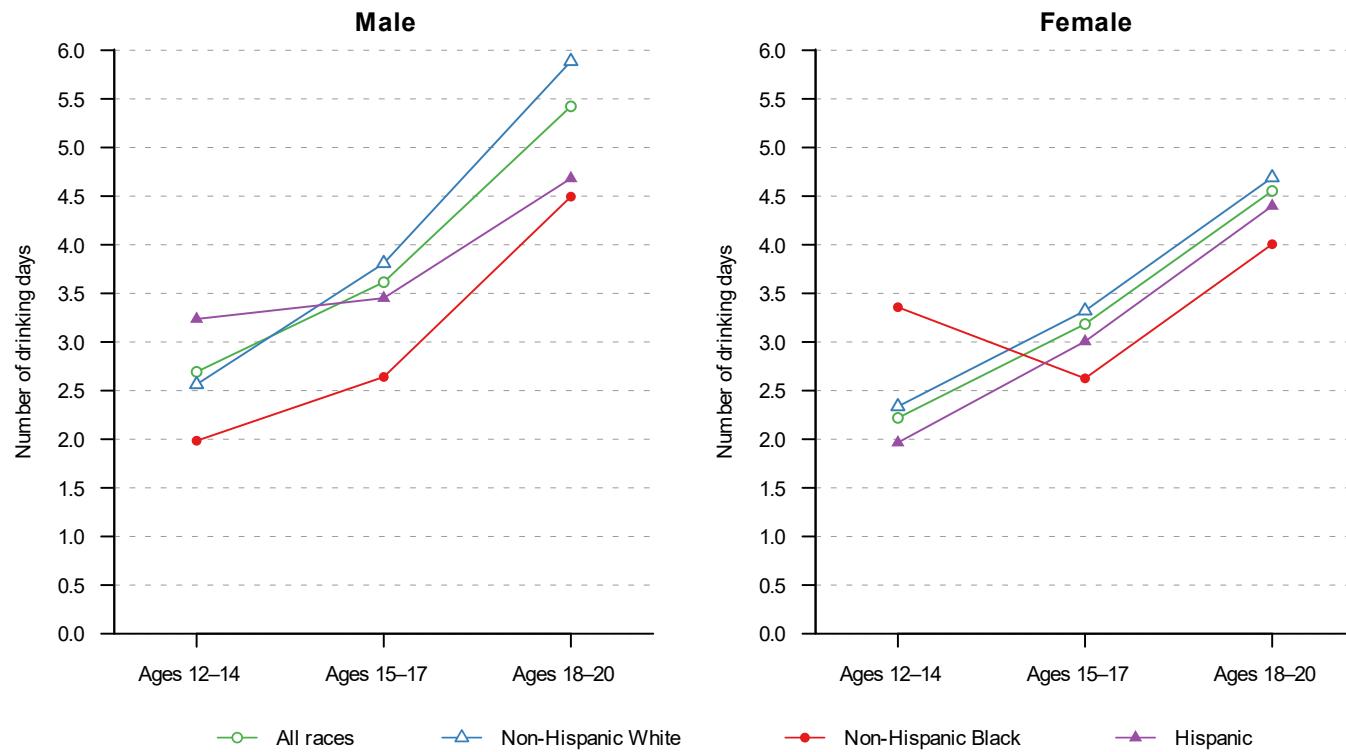

**Figure 3-1.** NSDUH: Mean frequency of drinking in the past 30 days among current drinkers ages 12–20, by sex and race/Hispanic origin, 1991–2019 (based on 3-year moving averages).

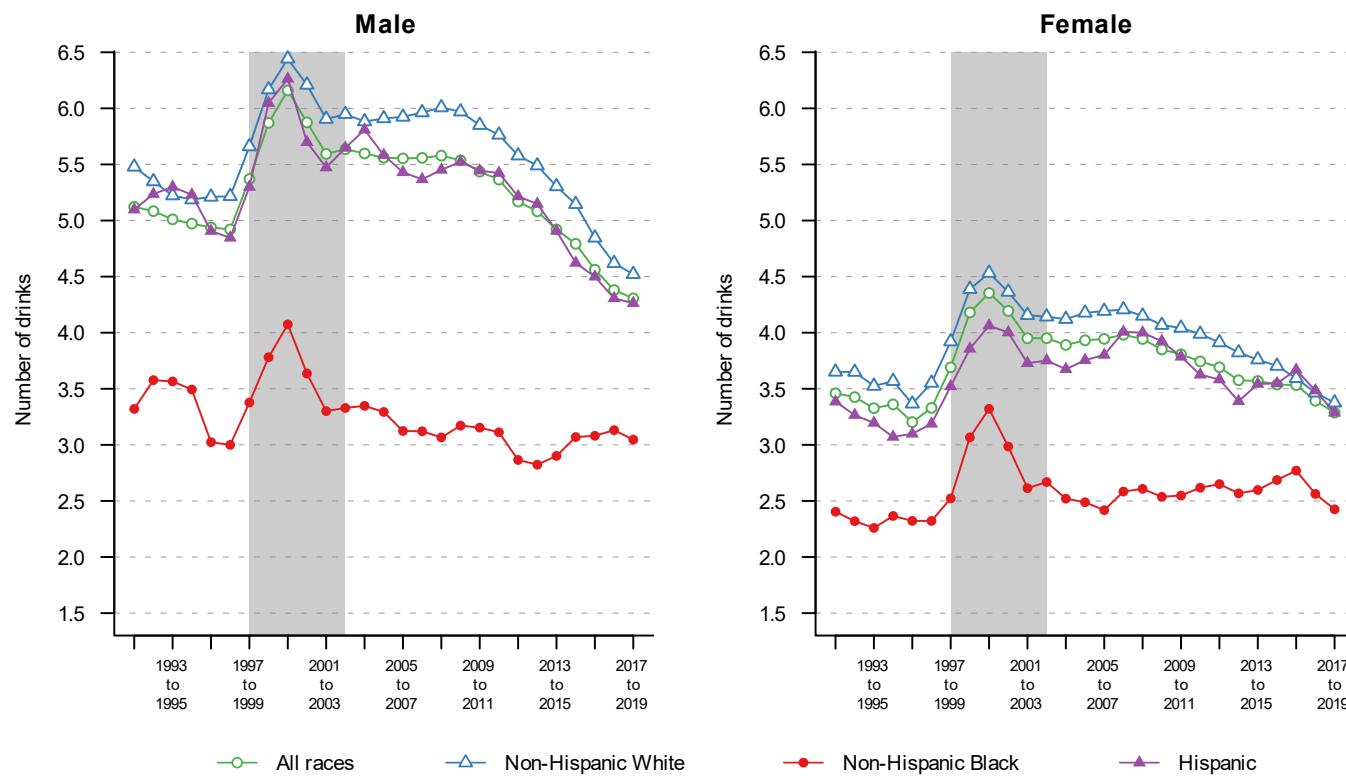

[Shaded areas mark the implementation of a major redesign to the NSDUH survey in 1999 and methodological changes in 2002.]

**Figure 3-2.** NSDUH: Mean frequency of drinking in the past 30 days among current drinkers ages 12–20, by age, sex, and race/Hispanic origin, 2017–2019 (based on 3-year averages).

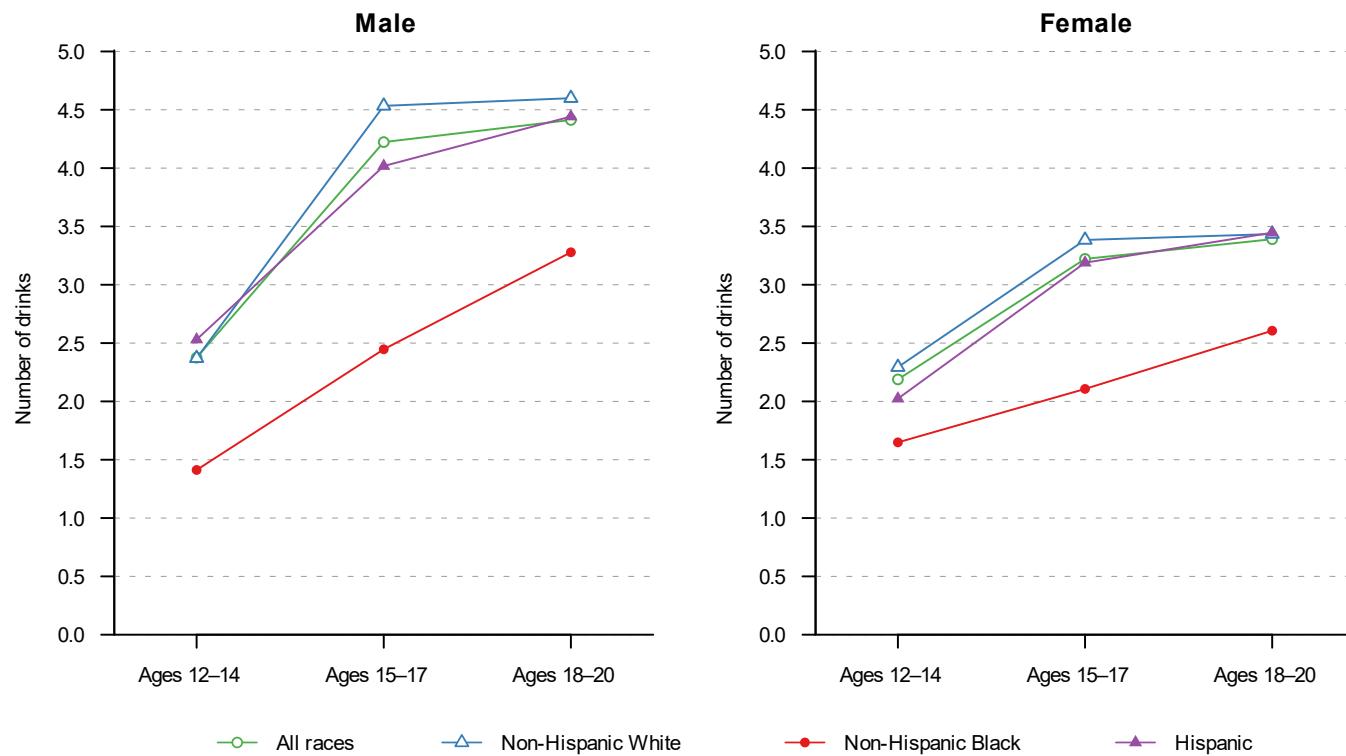

**Figure 4-1.** NSDUH: Mean quantity on drinking days in the past 30 days among current drinkers ages 12–20, by sex and race/Hispanic origin, 1991–2019 (based on 3-year moving averages).

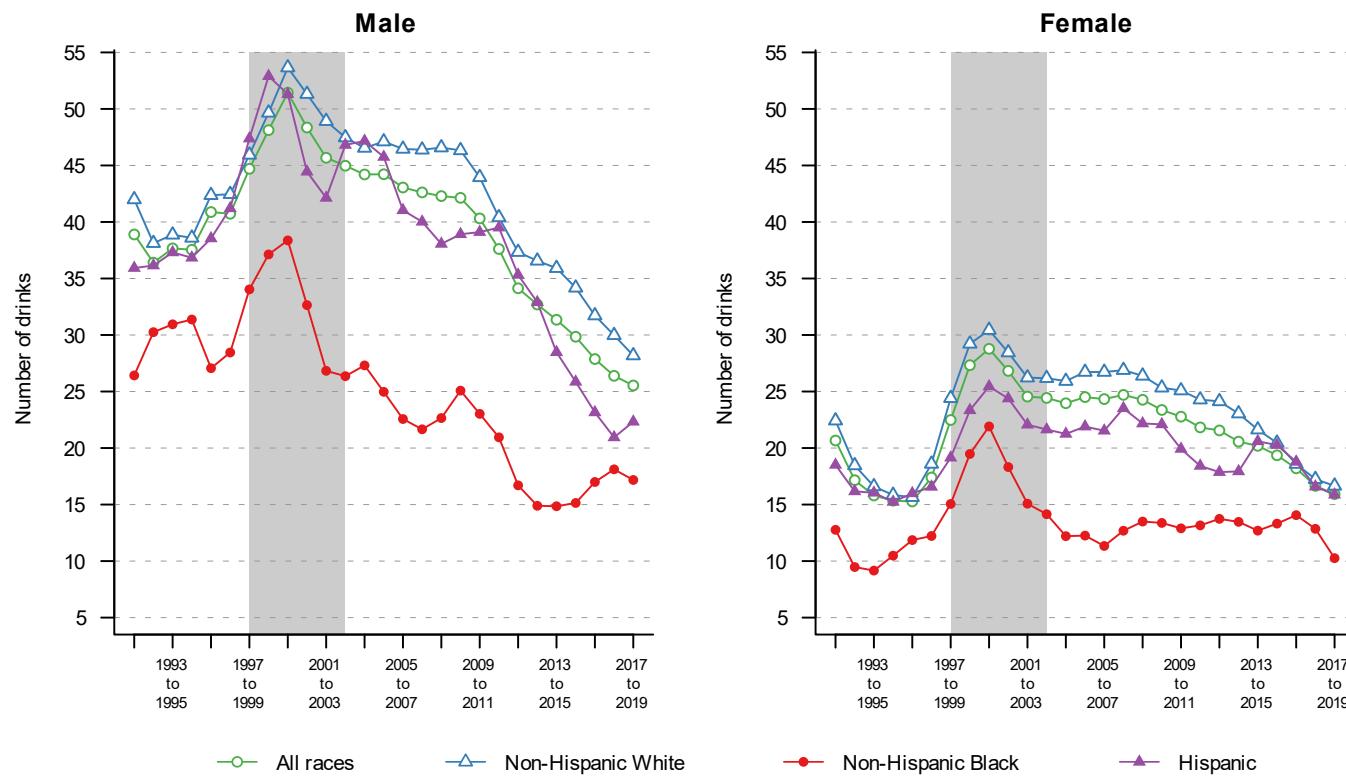

[Shaded areas mark the implementation of a major redesign to the NSDUH survey in 1999 and methodological changes in 2002.]

**Figure 4-2.** NSDUH: Mean quantity on drinking days in the past 30 days among current drinkers ages 12–20, by age, sex, and race/Hispanic origin, 2017–2019 (based on 3-year averages).

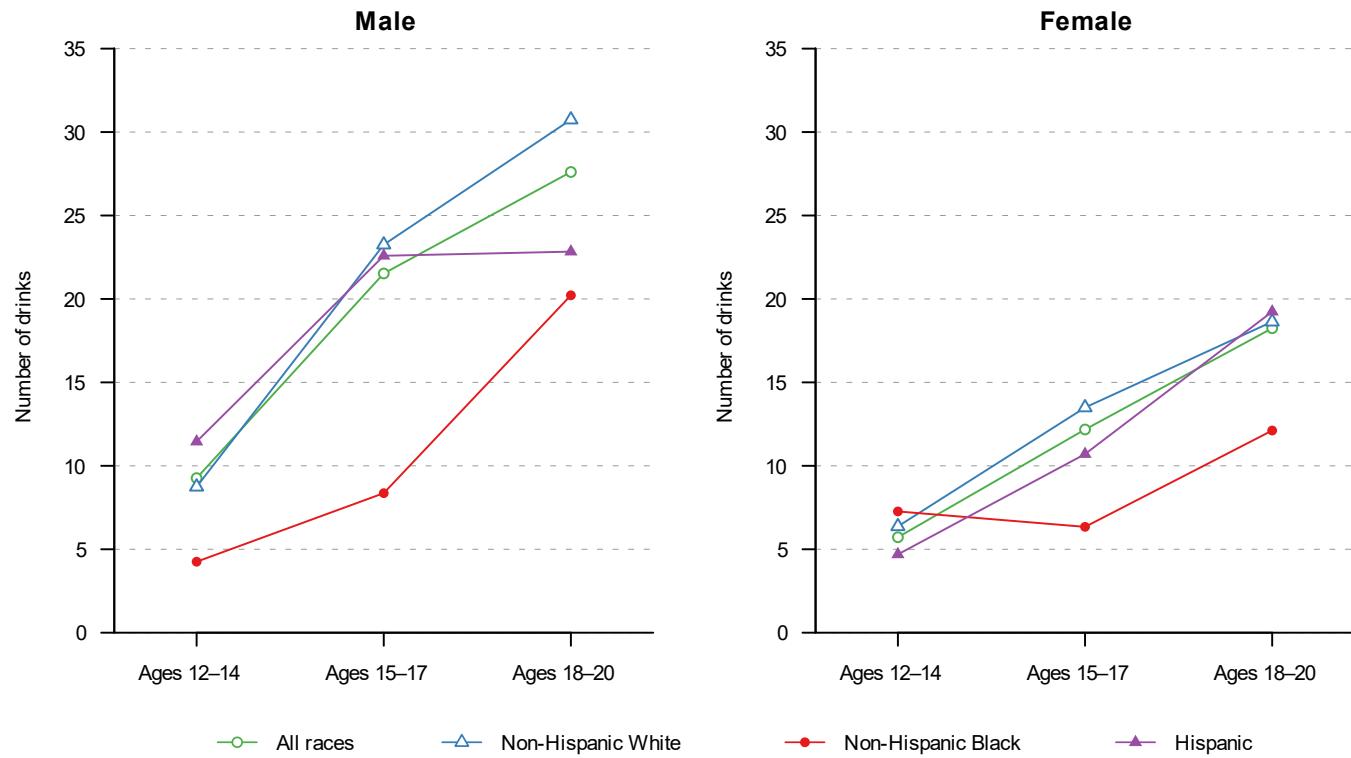

**Figure 5-1.** NSDUH: Average total number of drinks in the past 30 days among current drinkers ages 12–20, by sex and race/Hispanic origin, 1991–2019 (based on 3-year moving averages).

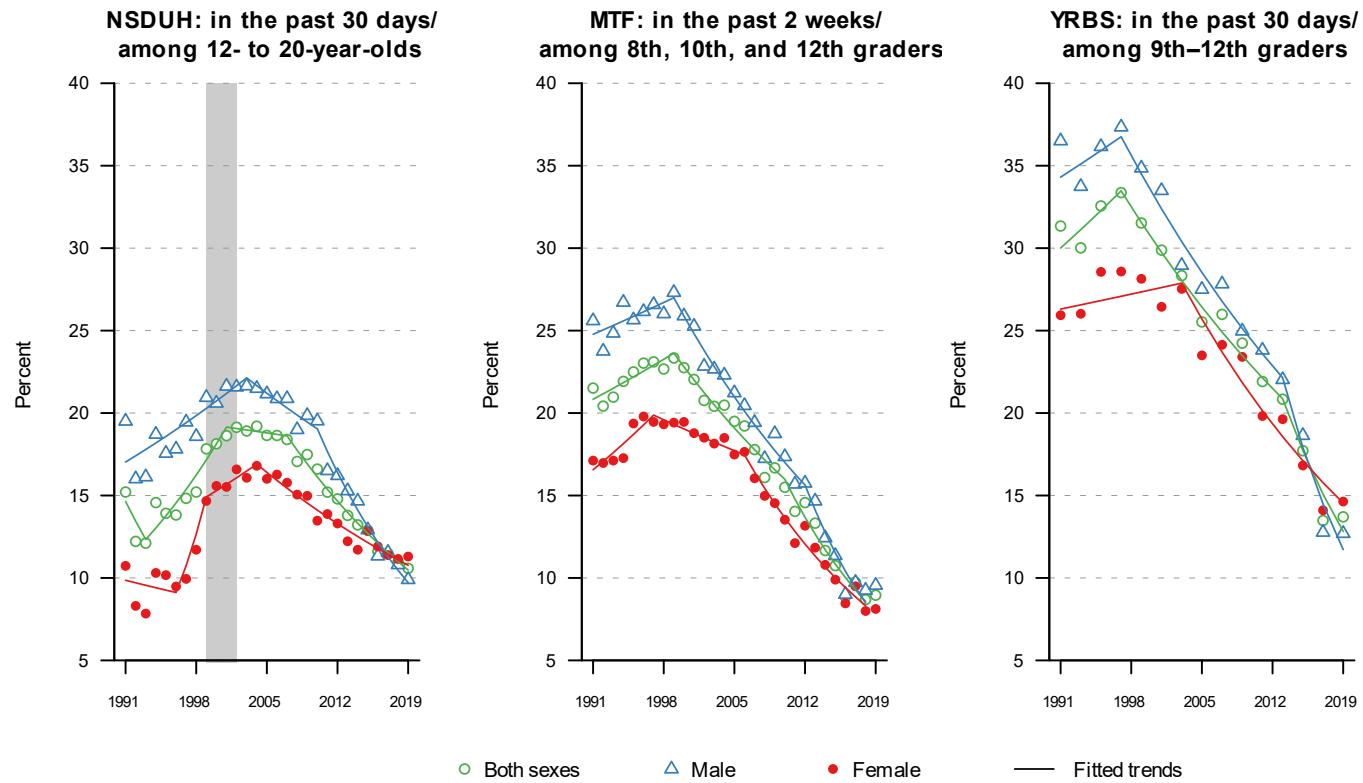

[Shaded areas mark the implementation of a major redesign to the NSDUH survey in 1999 and methodological changes in 2002.]

**Figure 5-2.** NSDUH: Average total number of drinks in the past 30 days among current drinkers ages 12–20, by age, sex, and race/Hispanic origin, 2017–2019 (based on 3-year averages).

**Figure 6-1.** Prevalence of binge drinking, by sex, 1991–2019.

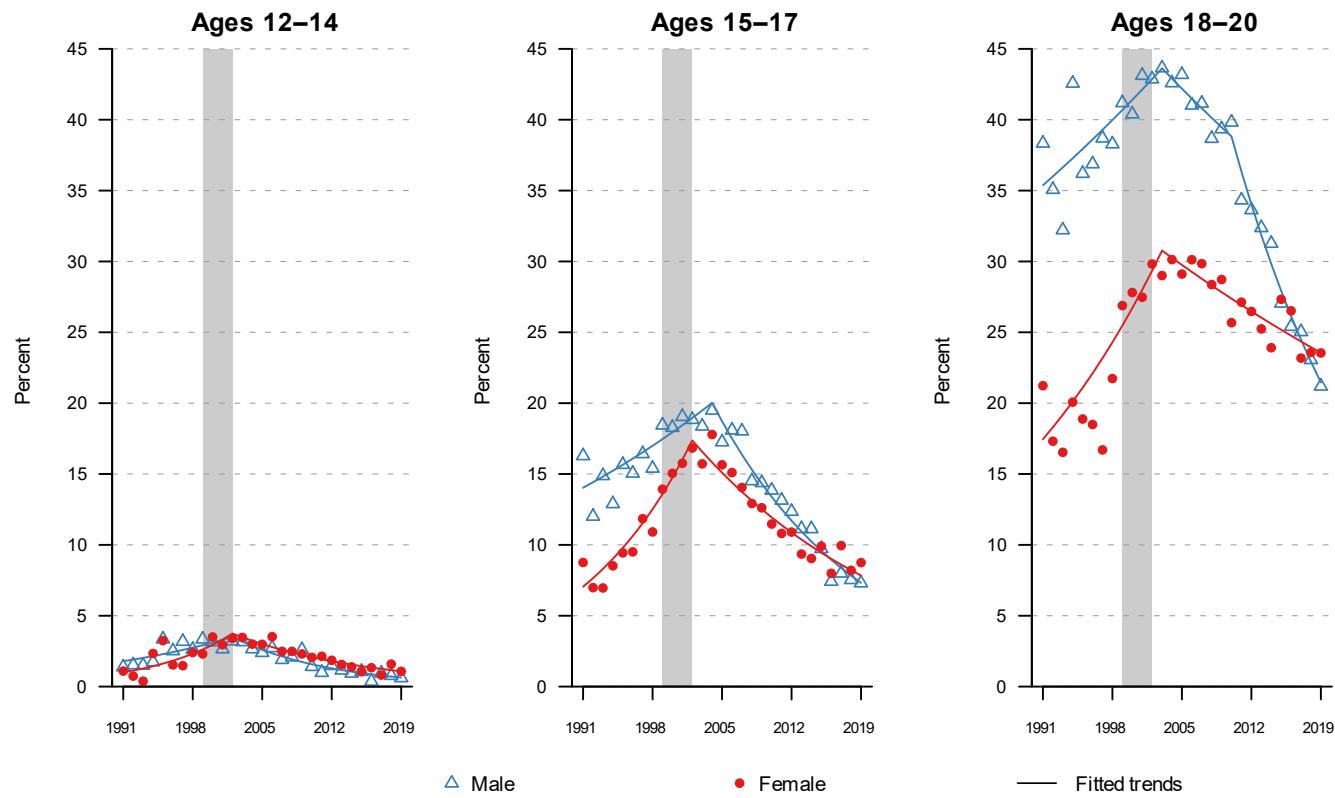

[Fitted trends result from joinpoint regression (see the methods section for detail).]

[The shaded area marks the implementation of a major redesign to the NSDUH survey in 1999 and methodological changes in 2002.]

Note: The threshold for females was changed to consumption of 4 or more drinks on an occasion in the past 30 days beginning in NSDUH 2015 and YRBS 2017.

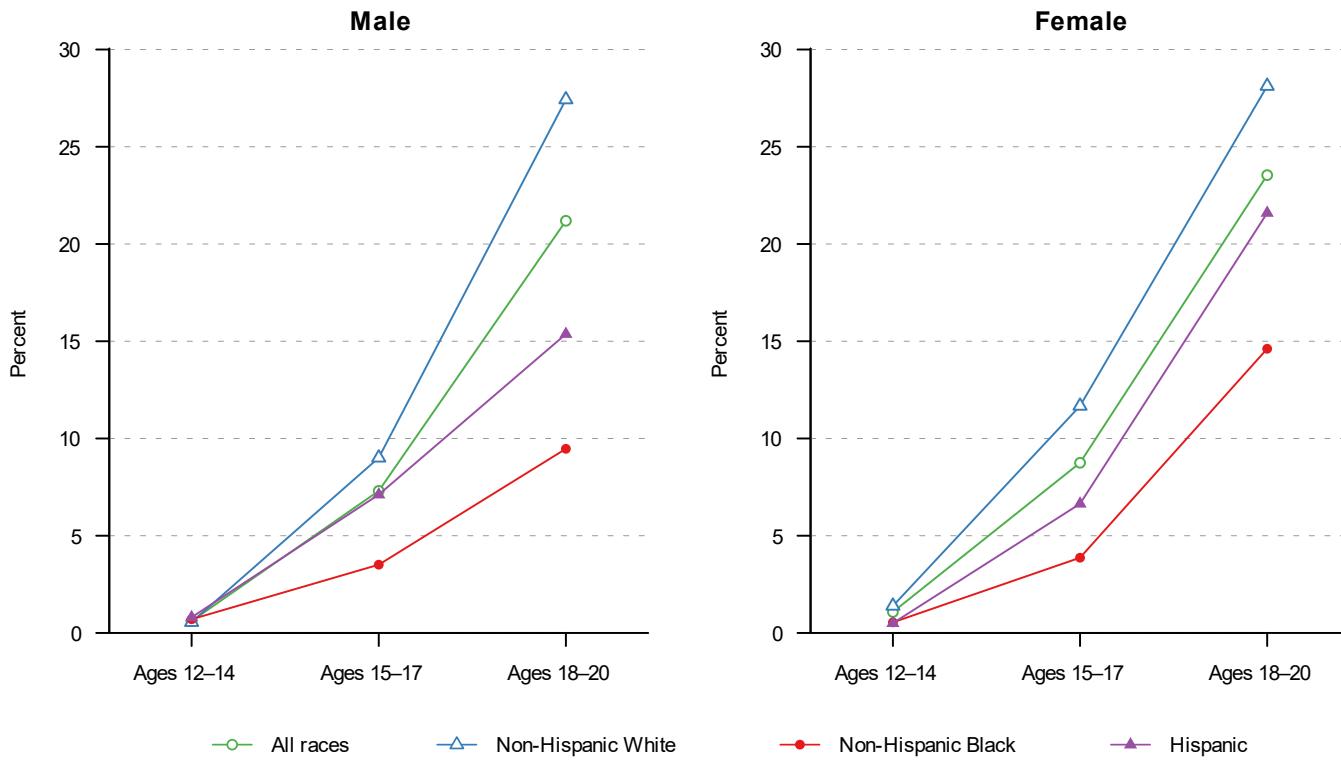

**Figure 6-2.** NSDUH: Prevalence of binge drinking in the past 30 days among 12- to 20-year-olds, by sex and age group, 1991–2019.

[Fitted trends result from joinpoint regression (see the methods section for detail).]

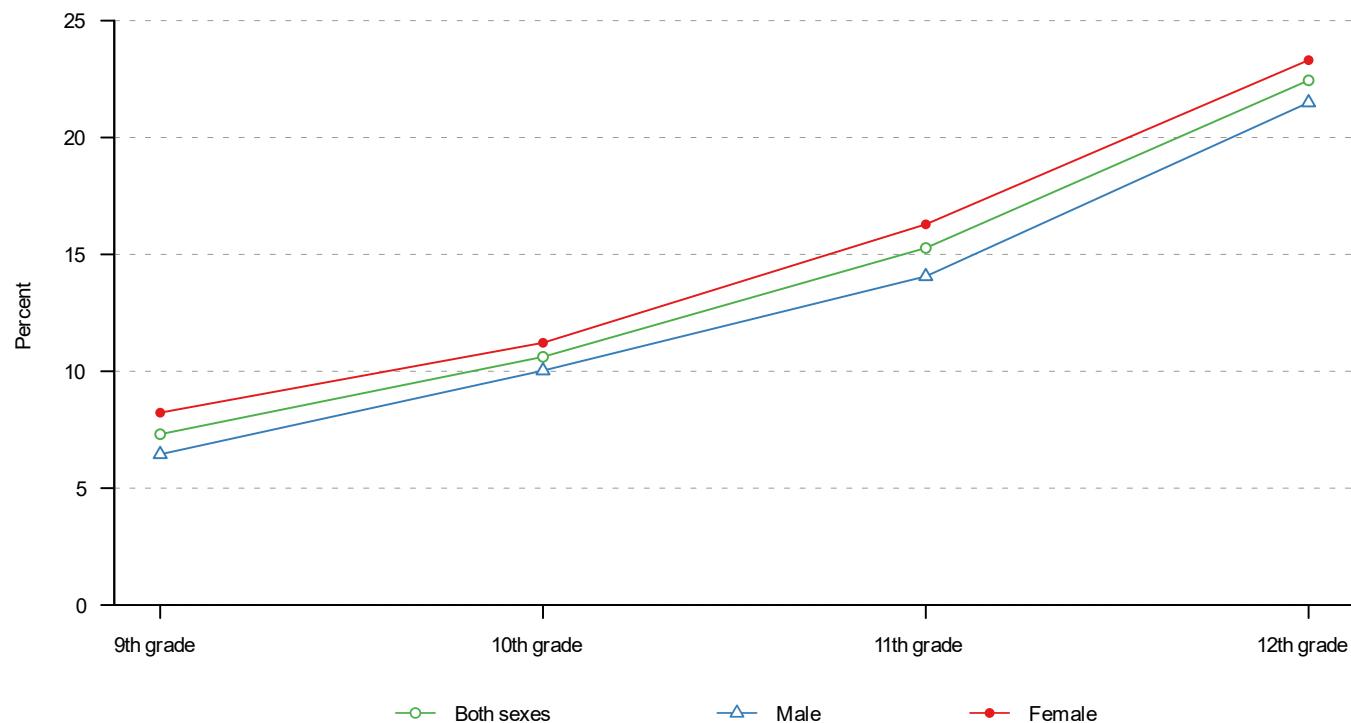

[Shaded areas mark the implementation of a major redesign to the NSDUH survey in 1999 and methodological changes in 2002.]

**Figure 6-3.** NSDUH: Prevalence of binge drinking in the past 30 days among 12- to 20-year-olds, by age, sex, and race/Hispanic origin, 2019.

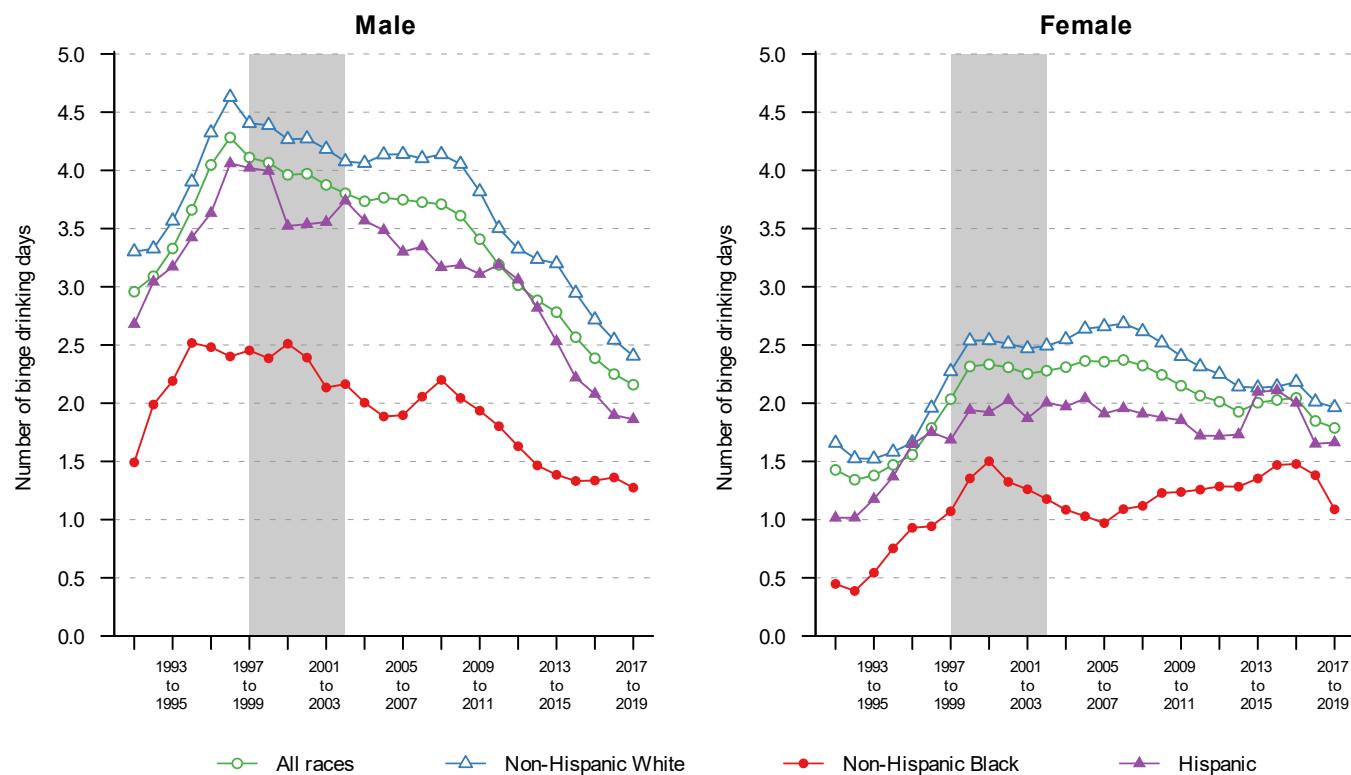

Note: The threshold for females was changed to consumption of 4 or more drinks on an occasion in the past 30 days beginning in NSDUH 2015.

**Figure 6-4.** YRBS: Prevalence of binge drinking in the past 30 days, by grade and sex, 2019.

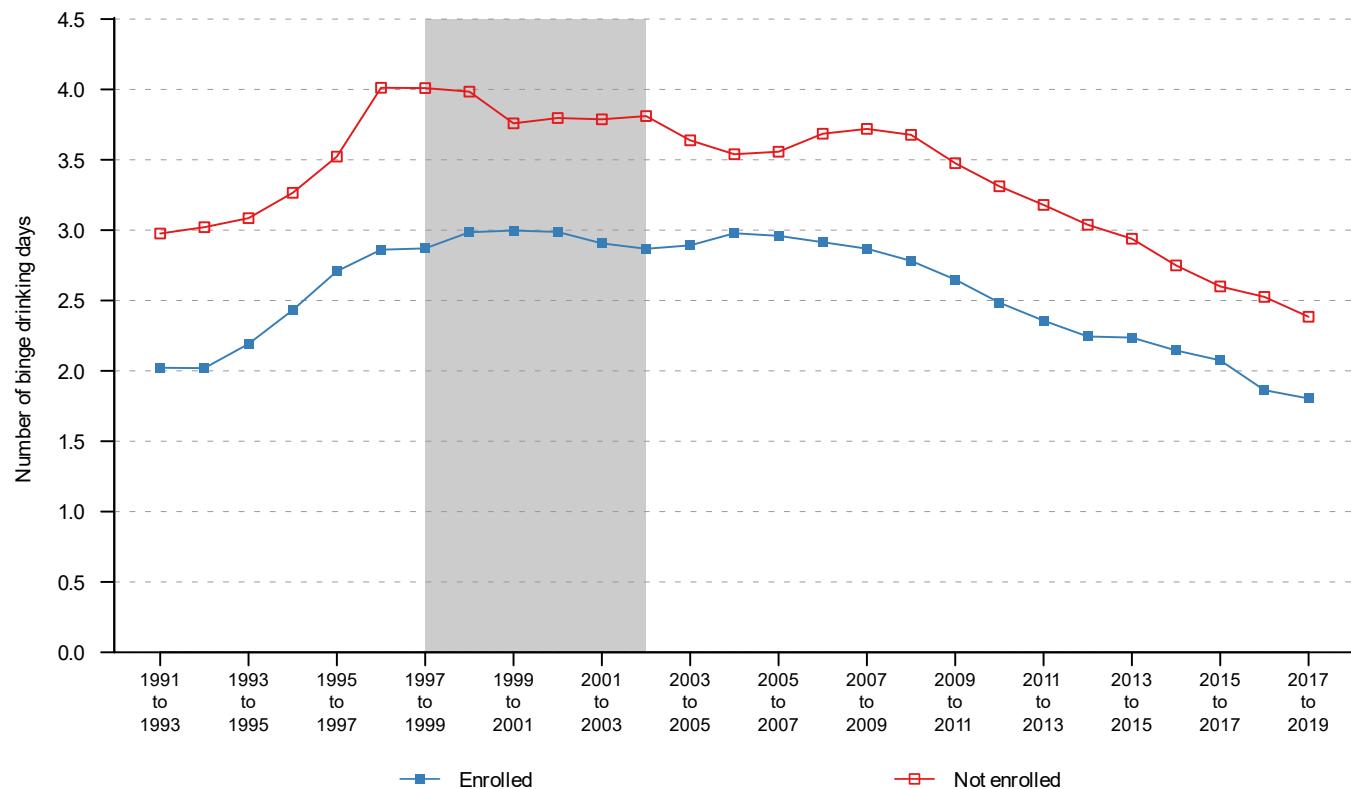

**Figure 6-5.** NSDUH: Mean number of binge drinking days in the past 30 days among current drinkers ages 12–20, by sex and race/Hispanic origin, 1991–2019 (based on 3-year moving averages).

[Shaded areas mark the implementation of a major redesign to the NSDUH survey in 1999 and methodological changes in 2002.]

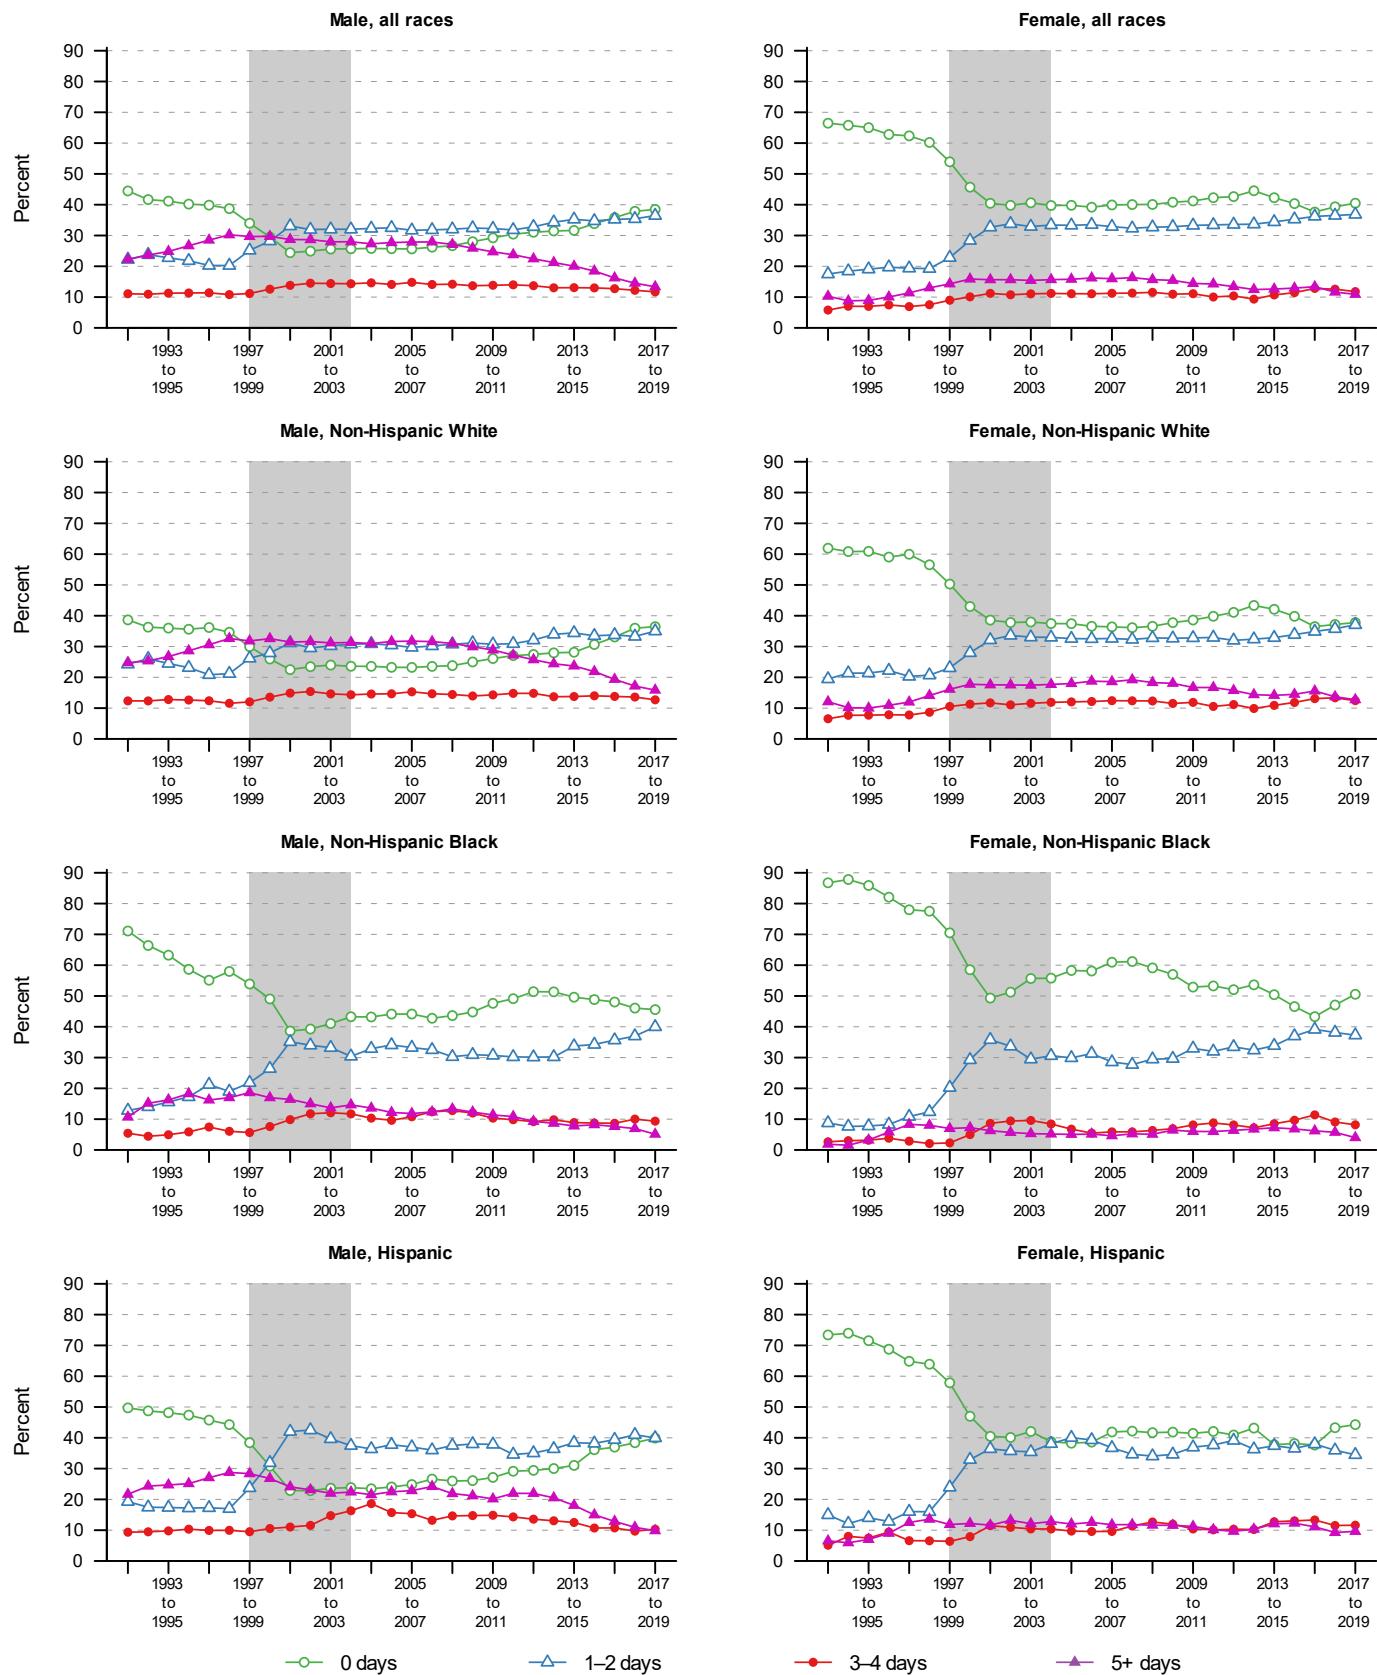

Note: The threshold for females was changed to consumption of 4 or more drinks on an occasion in the past 30 days beginning in NSDUH 2015 and YRBS 2017.

**Figure 6-6.** NSDUH: Mean number of binge drinking days in the past 30 days among current drinkers ages 12–20, by school enrollment status, 1991–2019 (based on 3-year moving averages).

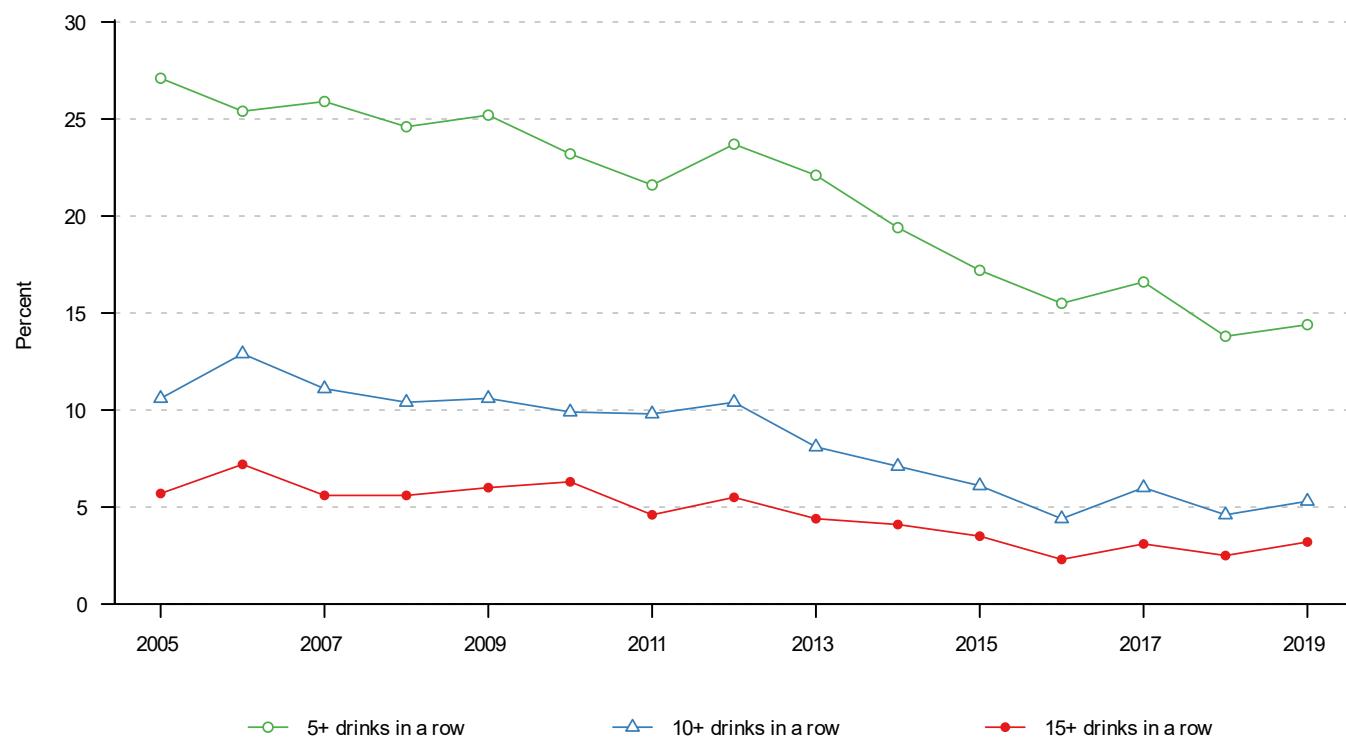

[The shaded area marks the implementation of a major redesign to the NSDUH survey in 1999 and methodological changes in 2002.]  
 Note: The threshold for females was changed to consumption of 4 or more drinks on an occasion in the past 30 days beginning in NSDUH 2015.

**Figure 6-7.** NSDUH: Frequency of binge drinking in the past 30 days among current drinkers ages 12–20, by category (0 days, 1–2 days, 3–4 days, 5+ days), sex, and race/Hispanic origin, 1991–2019 (based on 3-year moving averages).

[Shaded areas mark the implementation of a major redesign to the NSDUH survey in 1999 and methodological changes in 2002.]  
Note: The threshold for females was changed to consumption of 4 or more drinks on an occasion in the past 30 days beginning in NSDUH 2015.

**Figure 6-8. MTF: Prevalence of binge drinking (5+ drinks in a row) and extreme binge (high-intensity) drinking (10+ and 15+ drinks in a row) in the past 2 weeks among 12th graders, 2005–2019.**

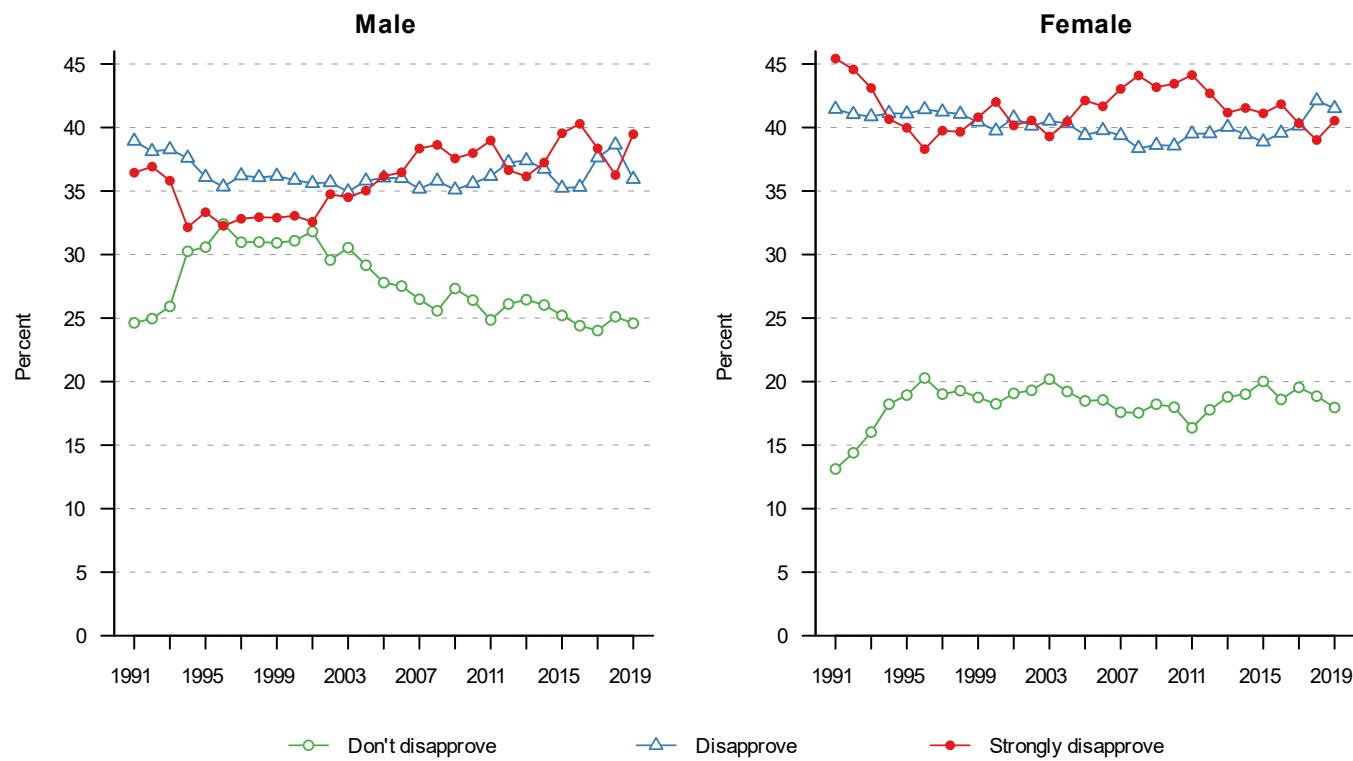

Note: The question of 5+ drinks in a row was asked of full sample, but questions of 10+ and 15+ drinks in a row were asked of one-sixth of the sample.

**Figure 7. MTF: Prevalence of having been drunk or very high from drinking alcoholic beverages in the past 30 days among 8th, 10th, and 12th graders, by sex, 1991–2019.**

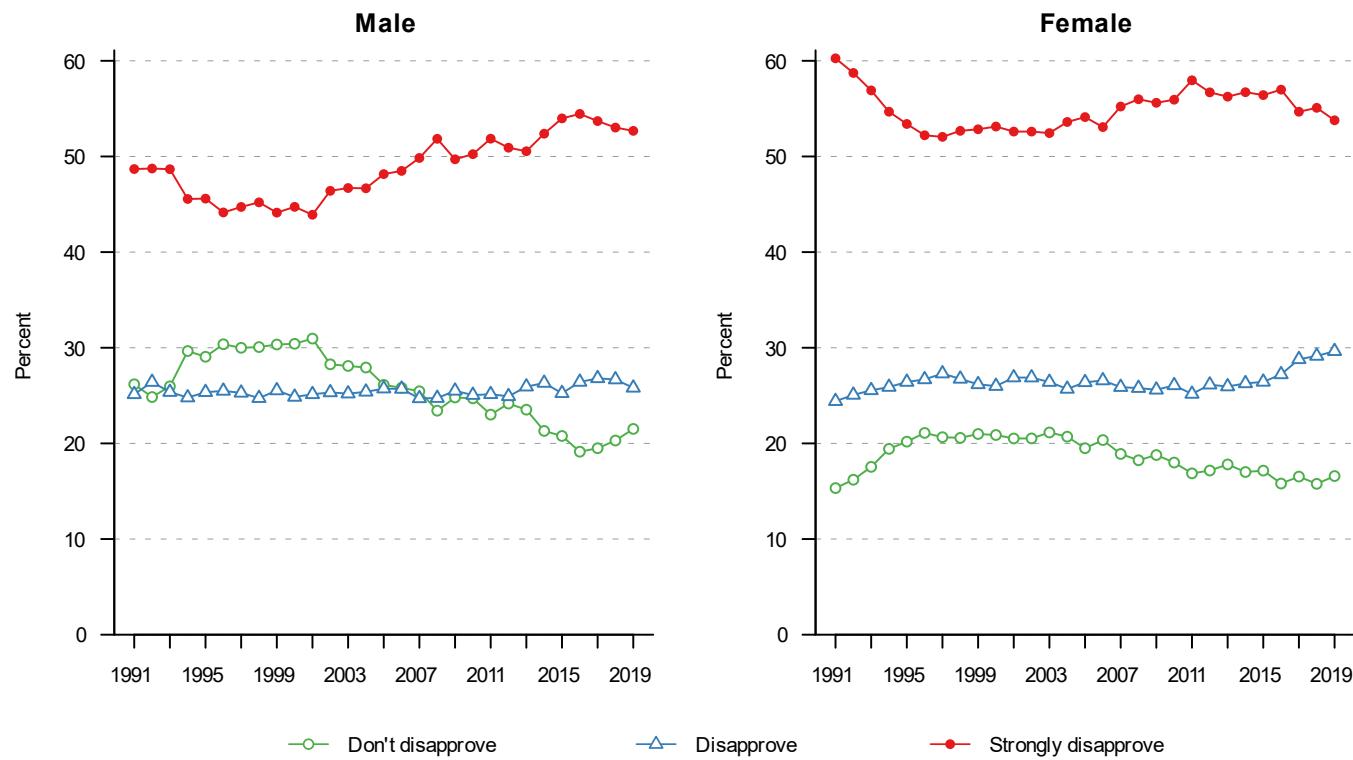

Note: The question was asked of only about half the 8th and 10th grade sample for 1991–1996. It was asked of the full sample for 1997–2019. For 12th graders, the question was asked of about one-third of the sample for 1991–2019.

**Figure 8-1a. MTF: Percent distribution of disapproval toward taking 1 or 2 drinks nearly every day among 8th, 10th, and 12th graders, by sex, 1991–2019.**

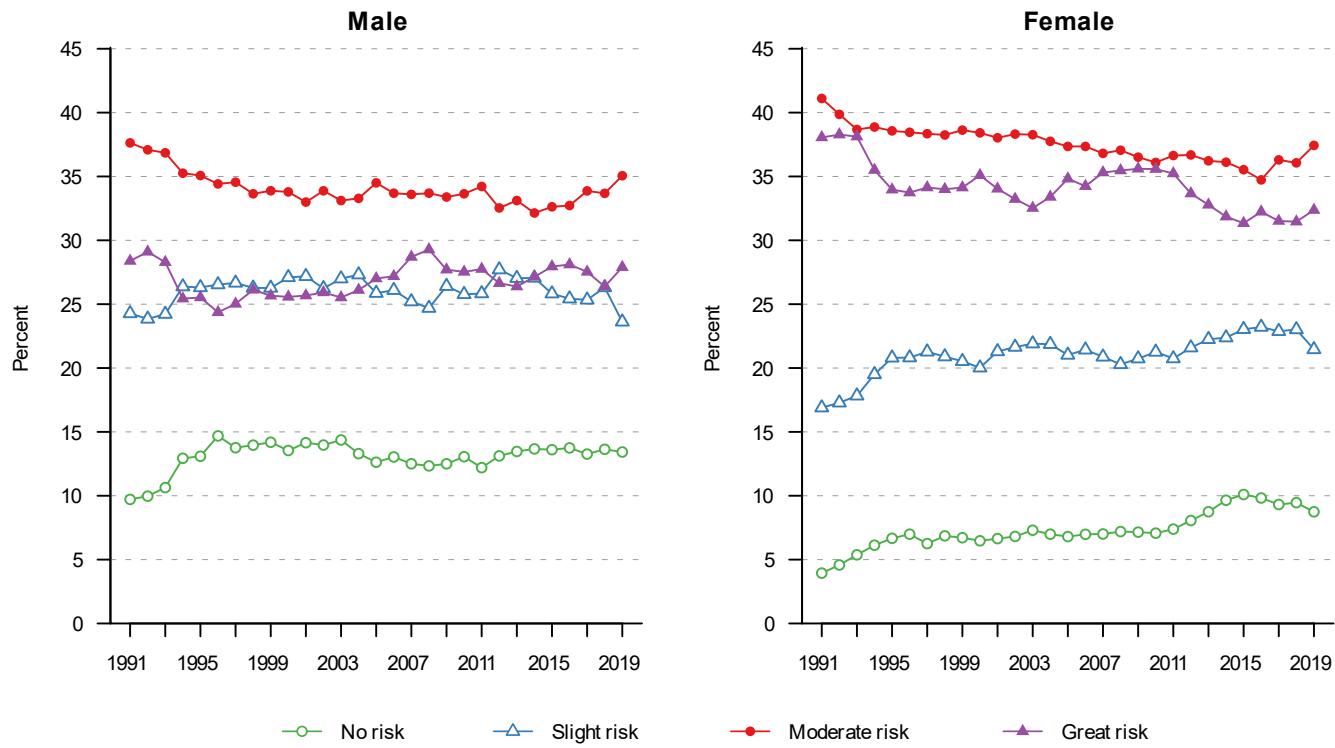

Note: The question was asked of only about half the 8th and 10th grade sample for 1991–1996. It was asked of the full sample for 1997–2019. For 12th graders, the question was asked of about two-thirds of the sample for 1991–2019.

**Figure 8-1b. MTF: Percent distribution of disapproval toward having 5 or more drinks once or twice each weekend among 8th, 10th, and 12th graders, by sex, 1991–2019.**

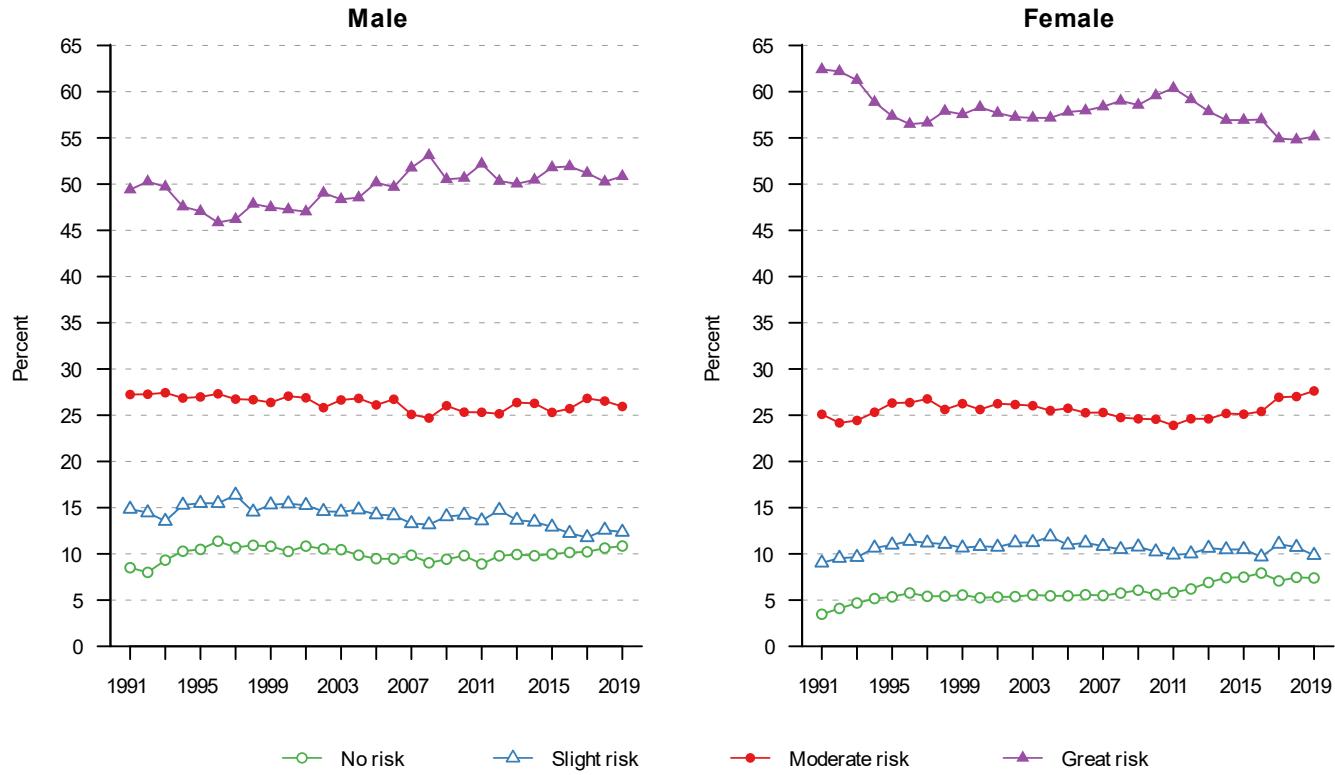

Note: The question was asked of only about half the 8th and 10th grade sample for 1991–1996. It was asked of the full sample for 1997–2019. For 12th graders, the question was asked of about two-thirds of the sample for 1991–2019.

**Figure 8-2a. MTF: Percent distribution of perceived risk of harm by having 1 or 2 drinks nearly every day among 8th, 10th, and 12th graders, by sex, 1991–2019.**

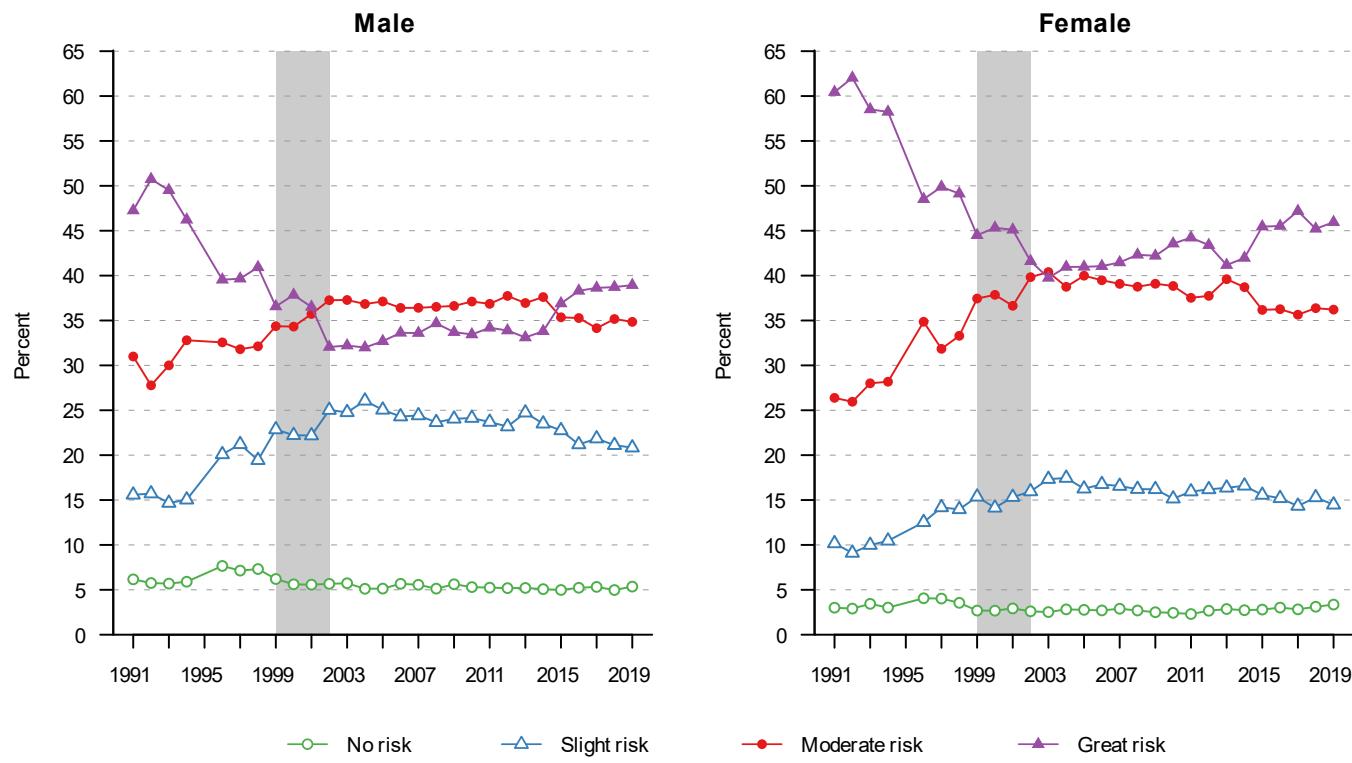

Note: The question was asked of only about half the 8th and 10th grade sample for 1991–1996. It was asked of the full sample for 1997–2019. For 12th graders, the question was asked of about five-sixths of the sample for 1991–2019.

**Figure 8-2b. MTF: Percent distribution of perceived risk of harm by having 5 or more drinks once or twice each weekend among 8th, 10th, and 12th graders, by sex, 1991–2019.**

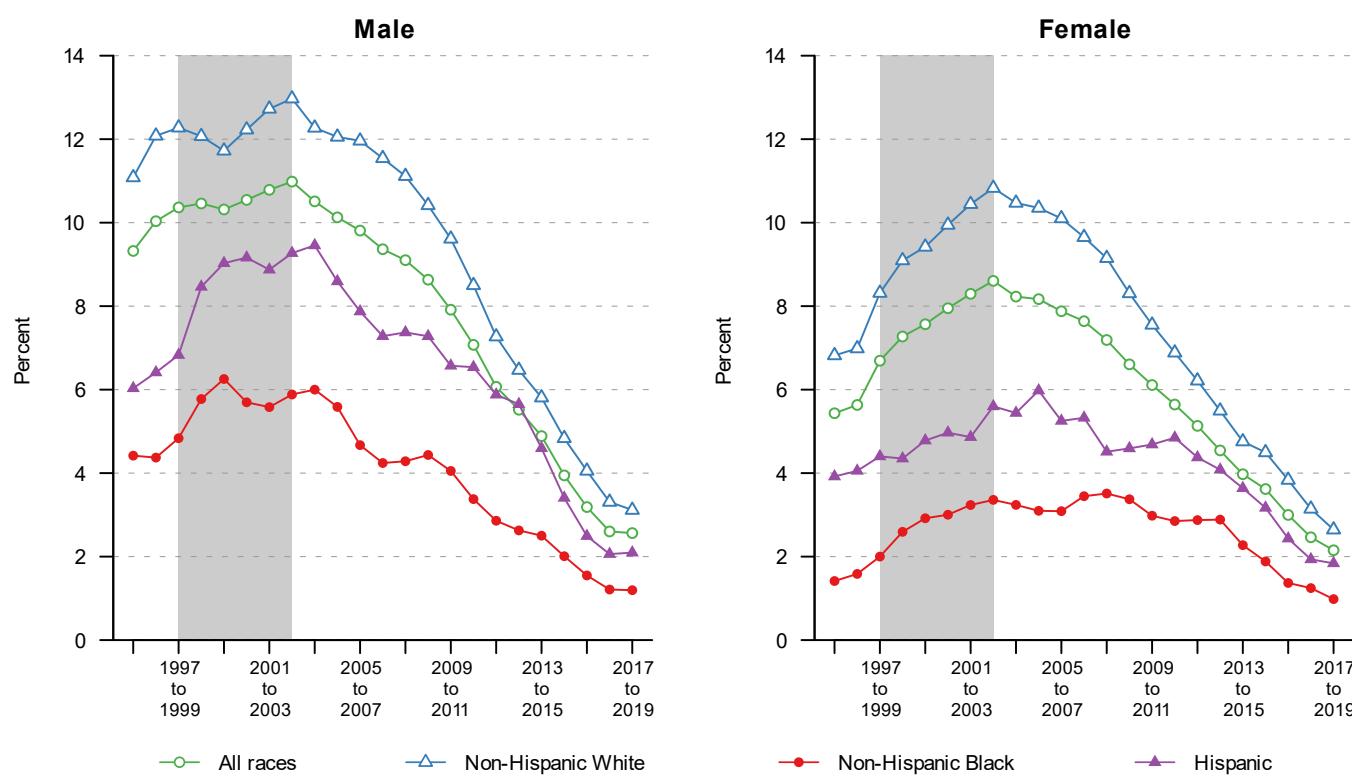

Note: The question was asked of only about half the 8th and 10th grade sample for 1991–1996. It was asked of the full sample for 1997–2019. For 12th graders, the question was asked of about five-sixths of the sample for 1991–2019.

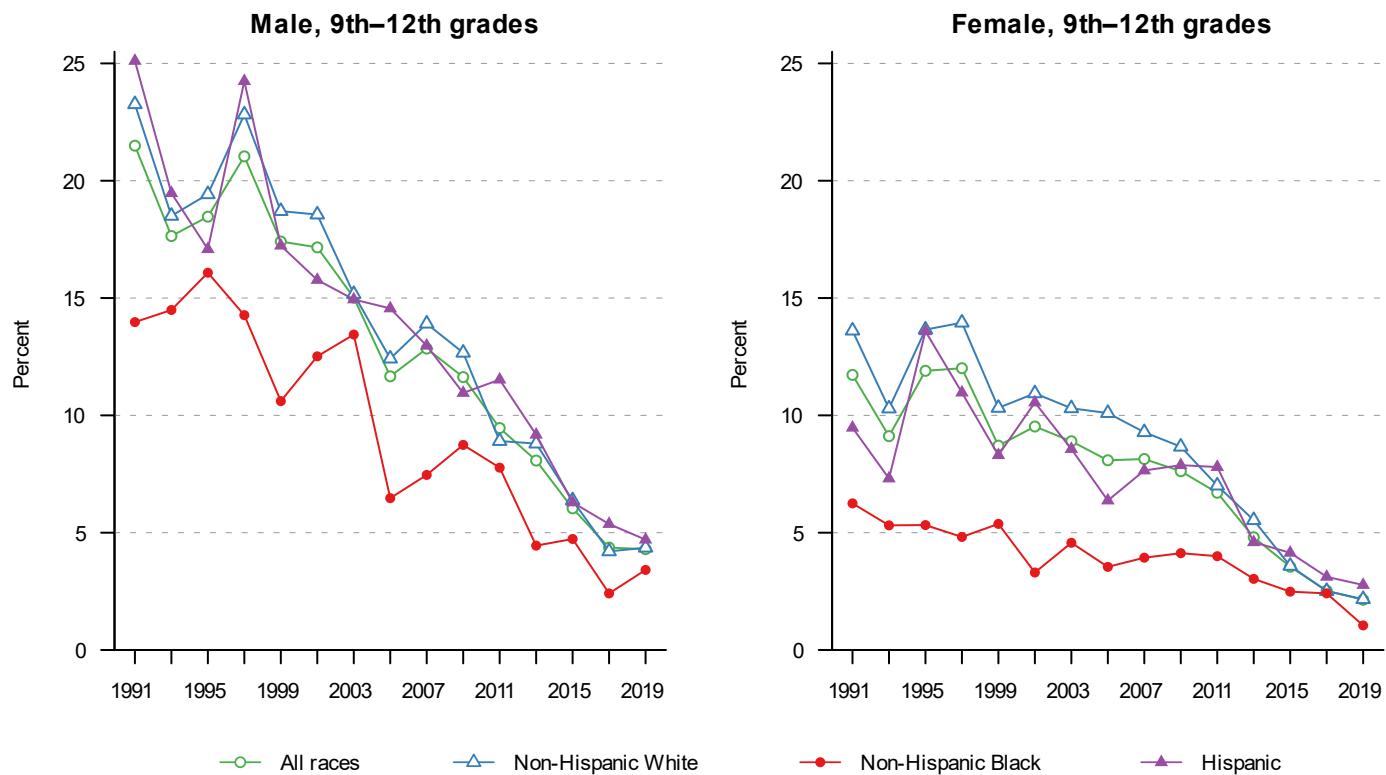

**Figure 8-2c.** NSDUH: Percent distribution of perceived risk of harm by having 5 or more drinks once or twice a week among 12- to 20-year-olds, by sex, 1991–2019.

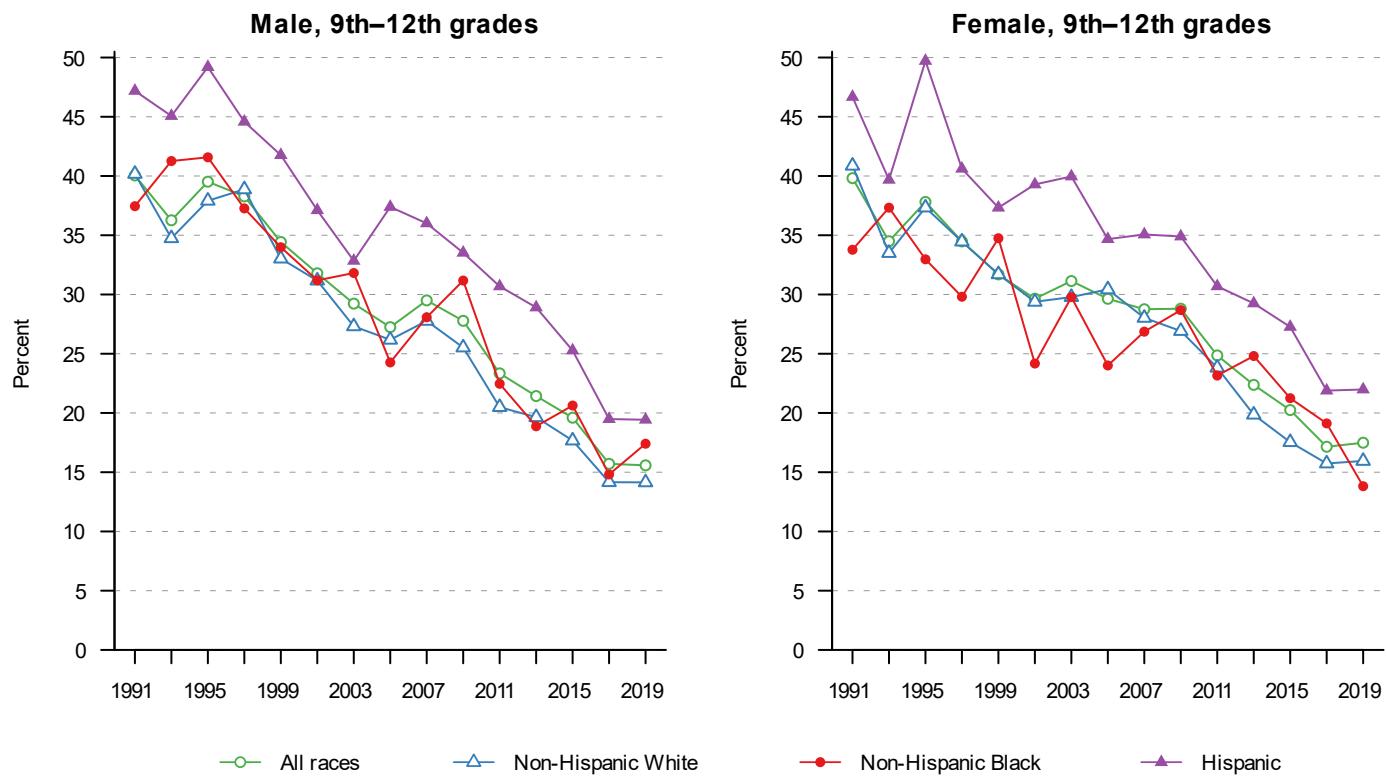

**Figure 9-1a.** NSDUH: Prevalence of driving a vehicle while under the influence of alcohol or in combination of illegal drugs in the past 12 months among 12- to 20-year-olds, by sex and race/Hispanic origin, 1995–2019.

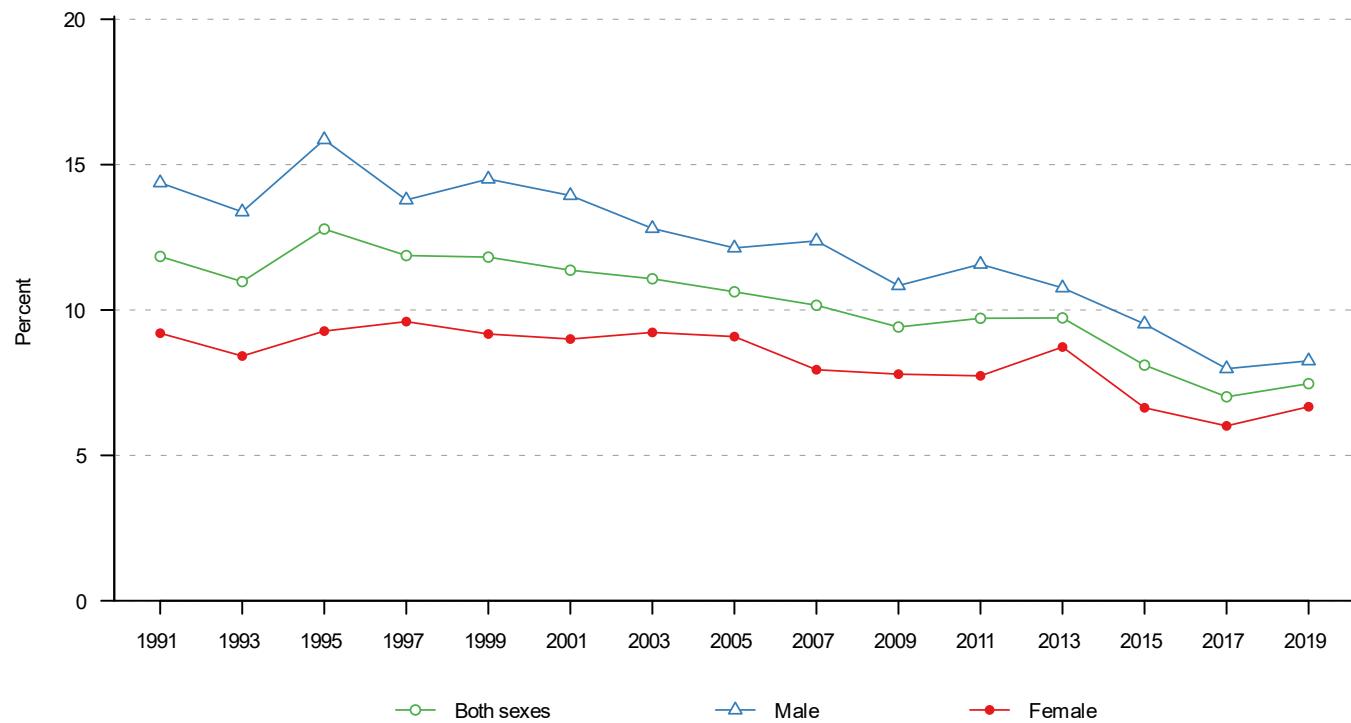

**Figure 9-1b.** YRBS: Prevalence of driving after drinking alcohol in the past 30 days, by sex and race/Hispanic origin, 1991–2019.

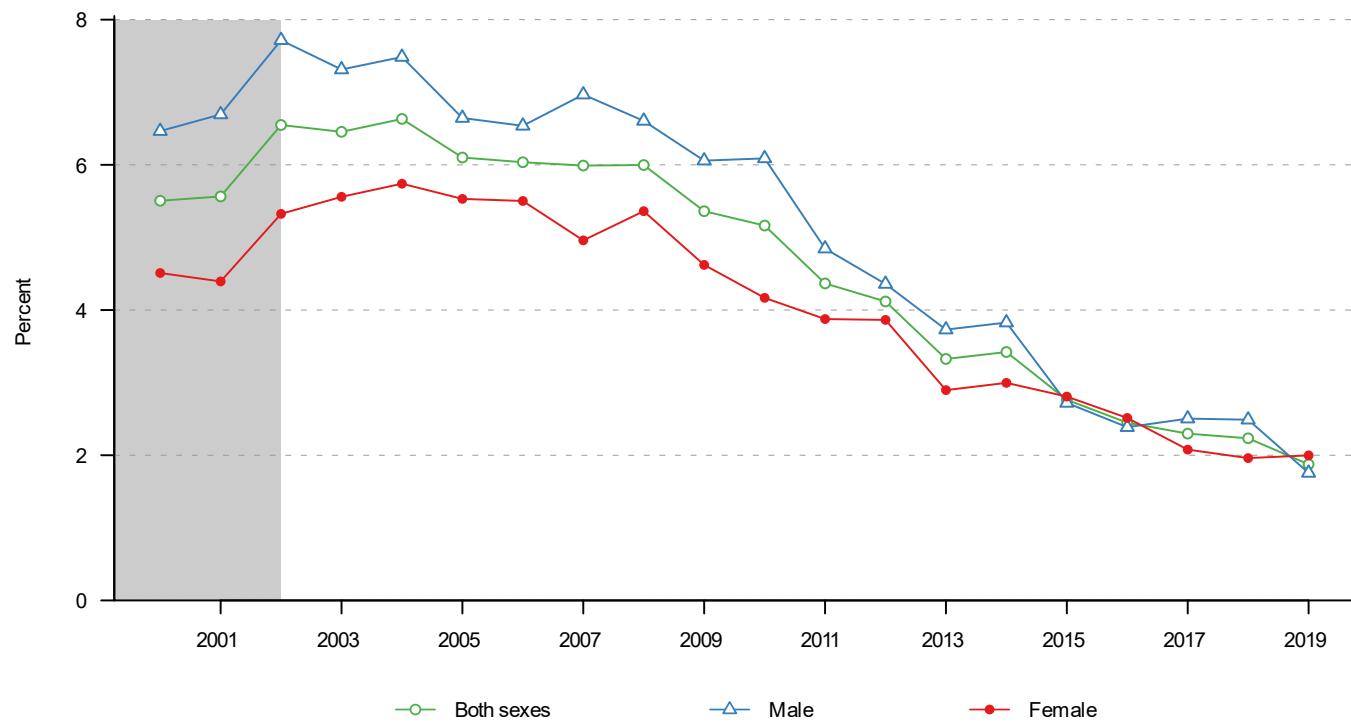

**Figure 9-1c.** YRBS: Prevalence of riding in a car driven by someone who had been drinking in the past 30 days, by sex and race/Hispanic origin, 1991–2019.

**Figure 9-2.** YRBS: Prevalence of drinking alcohol or using drugs before last sexual intercourse, by sex, 1991–2019.

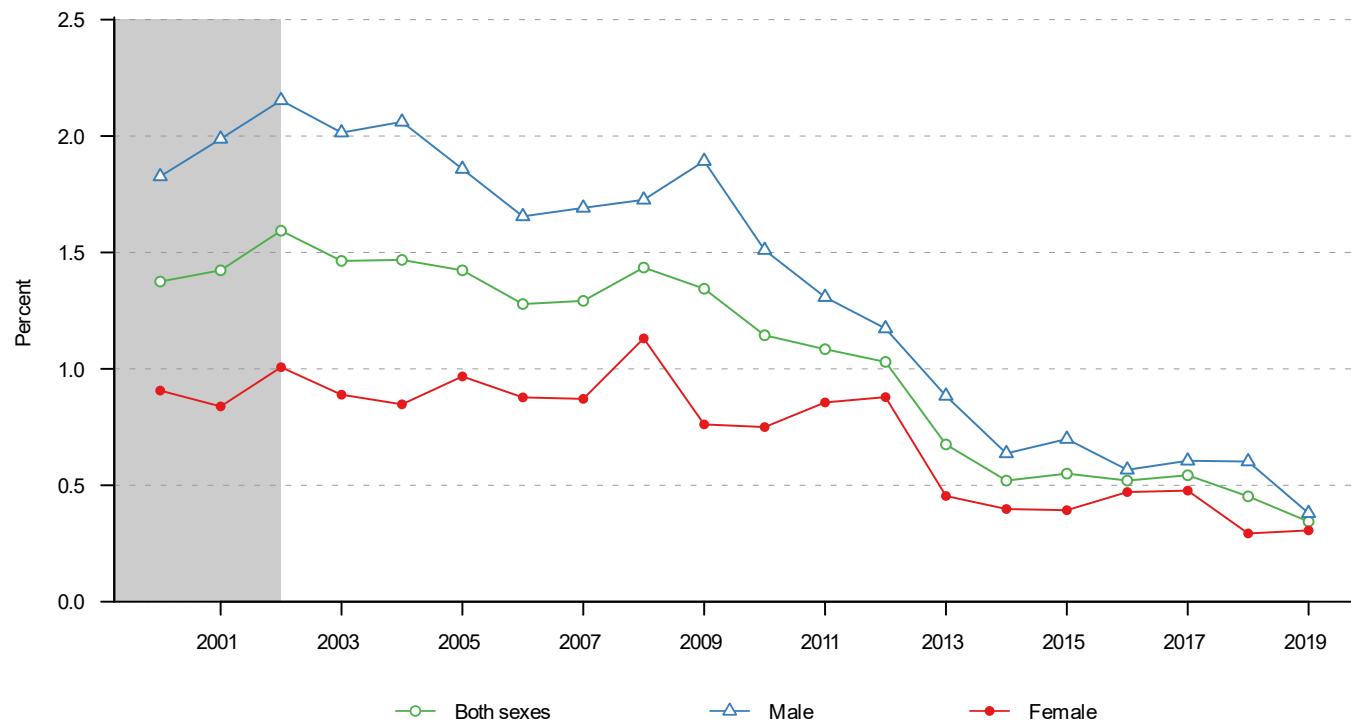

**Figure 9-3.** NSDUH: Prevalence of drinking and activity with risk of physical danger in the past 12 months among 12- to 20-year-olds, by sex, 2000–2019.

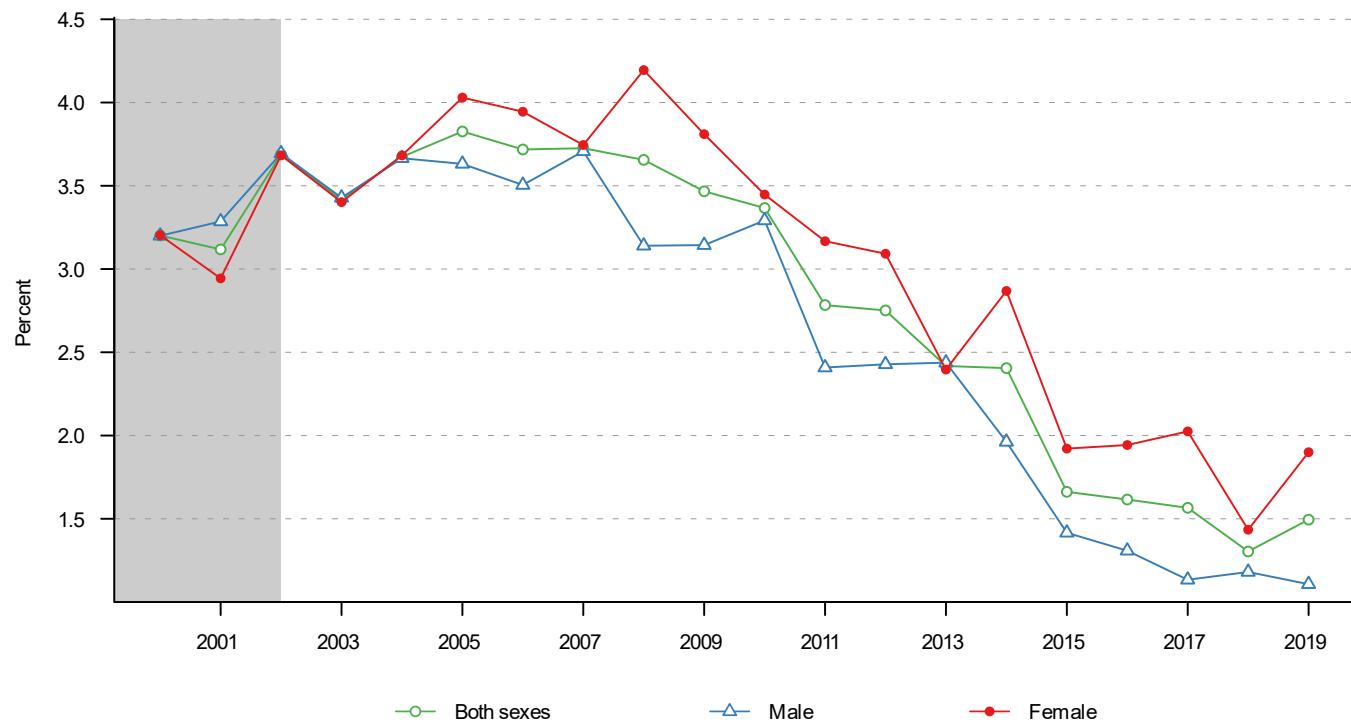

[The shaded area marks the implementation of methodological changes to the NSDUH survey in 2002.]

**Figure 9-4.** NSDUH: Prevalence of drinking and getting into legal trouble in the past 12 months among 12- to 20-year-olds, by sex, 2000–2019.

**Figure 9-5.** NSDUH: Prevalence in the past 12 months of problems with family or friends caused by drinking among 12- to 20-year-olds, by sex, 2000–2019.

[Shaded areas mark the implementation of methodological changes to the NSDUH survey in 2002.]

**Table 1-1.** NSDUH: Prevalence of drinking in the past 30 days, by age, sex, and race/Hispanic origin,<sup>1</sup> among 12- to 20-year-olds, United States, 1991–2019.<sup>2</sup>

S.E. = standard error of the estimate.

# Estimates are unreliable due to relative standard errors > 17.5%.

<sup>1</sup> Data earlier than 1999 are not available for non-Hispanic Native American/Alaska Native; non-Hispanic Asian, Native Hawaiian, or Other Pacific Islander, and non-Hispanic more than one race.

<sup>2</sup> Due to survey design modifications, comparisons of results from before 1999 to 1999–2001 and 2002–2019 need to be made with caution.

— Fewer than 10 respondents in the cell.

S.E. = standard error of the estimate.

# Estimates are unreliable due to relative standard errors > 17.5%.

<sup>1</sup> Data earlier than 1999 are not available for non-Hispanic Native American/Alaska Native; non-Hispanic Asian, Native Hawaiian, or Other Pacific Islander, and non-Hispanic more than one race.

<sup>2</sup> Due to survey design modifications, comparisons of results from before 1999 to 1999–2001 and 2002–2019 need to be made with caution.

**Table 4.** NSDUH: Mean quantity of drinking on drinking days in the past 30 days, by age, sex, and race/Hispanic origin,<sup>1</sup> among current drinkers ages 12–20, United States, 1991–2019 (based on 3-year moving averages).<sup>2</sup>

— Fewer than 10 respondents in the cell.

S.E. = standard error of the estimate.

# Estimates are unreliable due to relative standard errors > 17.5%.

<sup>1</sup> Data earlier than 1999 are not available for non-Hispanic Native American/Alaska Native; non-Hispanic Asian, Native Hawaiian, or Other Pacific Islander, and non-Hispanic more than one race.

<sup>2</sup> Due to survey design modifications, comparisons of results from before 1999 to 1999–2001 and 2002–2019 need to be made with caution.

— Fewer than 10 respondents in the cell.

S.E. = standard error of the estimate.

# Estimates are unreliable due to relative standard errors > 17.5%.

<sup>1</sup> Data earlier than 1999 are not available for non-Hispanic Native American/Alaska Native; non-Hispanic Asian, Native Hawaiian, or Other Pacific Islander, and non-Hispanic more than one race.

<sup>2</sup> Due to survey design modifications, comparisons of results from before 1999 to 1999–2001 and 2002–2019 need to be made with caution.

**Table 6-1.** NSDUH: Prevalence of binge drinking<sup>1</sup> in the past 30 days, by age, sex, and race/Hispanic origin,<sup>2</sup> among 12- to 20-year-olds, United States, 1991–2019.<sup>3</sup>

S.E. = standard error of the estimate.

# Estimates are unreliable due to relative standard errors > 17.5%.

<sup>1</sup> The threshold of binge drinking was consumption of 5 or more drinks on an occasion for both females and males prior to 2015. The threshold for females was changed to consumption of 4 or more drinks on an occasion in the past 30 days beginning in 2015, and the change may potentially inflate the estimates for 2015–2019.

<sup>2</sup> Data earlier than 1999 are not available for non-Hispanic Native American/Alaska Native; non-Hispanic Asian, Native Hawaiian, or Other Pacific Islander, and non-Hispanic more than one race.

<sup>3</sup> Due to survey design modifications, comparisons of results from before 1999 to 1999–2001 and 2002–2019 need to be made with caution.

— Fewer than 10 respondents in the cell.

S.E. = standard error of the estimate.

# Estimates are unreliable due to relative standard errors > 17.5%.

<sup>1</sup> The threshold of binge drinking was consumption of five or more drinks on an occasion for both females and males prior to 2015. The threshold for females was changed to consumption of four or more drinks on an occasion in the past 30 days beginning in 2015, and the change may potentially inflate the estimates for 2015–2019.

<sup>2</sup> Data earlier than 1999 are not available for non-Hispanic Native American/Alaska Native; non-Hispanic Asian, Native Hawaiian, or Other Pacific Islander, and non-Hispanic more than one race.

<sup>3</sup> Due to survey design modifications, comparisons of results from before 1999 to 1999–2001 and 2002–2019 need to be made with caution.

**Table 7.** MTF: Prevalence of having been drunk or very high from drinking alcoholic beverages in the past 30 days, by grade and sex, United States, 1991–2019.

<sup>1</sup> Estimates for 8th–12th grades combined are calculated by AEDS using the MTF public-use data.

<sup>2</sup> The question was asked of only about half the 8th- and 10th-grade sample for 1991–1996. It was asked of the full sample for 1997–2019.

<sup>3</sup> The question was asked of about one-third of the 12th-grade sample for 1991–2019.

NOTE: Standard errors are not available.

S.E. = standard error of the estimate.

# Estimates are unreliable due to relative standard errors > 17.5%.

<sup>1</sup> Data earlier than 1999 are not available for non-Hispanic Native American/Alaska Native; non-Hispanic Asian, Native Hawaiian, or Other Pacific Islander, and non-Hispanic more than one race.

<sup>2</sup> Due to survey design modifications, comparisons of results from before 1999 to 1999–2001 and 2002–2019 need to be made with caution.

## Appendix A. Differences Among Survey Data Sources

ITEM	NHSDA/NSDUH	MTF	YRBS
<b>Sample Characteristics</b>			
Survey population	Civilian, noninstitutionalized population ages 12 and older, including residents of households and noninstitutional group quarters, and civilians living on military installations	8th, 10th, 12th graders enrolled in school	9th through 12th graders enrolled in school
Sample size (2019)	67,625 youth and adults 18,766 12- to 20-year-olds included in the public use file	12th grade: 13,713/128 schools 10th grade: 14,595/126 schools 8th grade: 14,223/143 schools	13,677/136 schools
Sampling procedure	Independent, multistage area probability sample for each State and Washington, DC: 1. Area segments/field interviewer regions (PPS) 2. Addresses/area segments 3. Persons/addresses	Multistage area probability sampling: 1. Geographic areas 2. Schools/area (PPS) 3. Students/school	3-stage cluster sampling: 1. Primary sampling units 2. School/PSU (PPS) 3. Classes/school
Year survey initiated	1971	1975	1991
Latest year available within report range	2019	2019	2019
Frequency of administration	Annual (from 1991)	Annual (from 1991 for all 3 grades)	Every 2 years
Location of administration	Home	School	School
<b>Alcohol Items</b>			
<b>Prevalence of Use</b>			
• Past 30 days	During the past 30 days, on how many days did you drink 1 or more drinks of an alcoholic beverage?	On how many occasions (if any) have you had alcoholic beverages to drink—more than just a few sips—during the last 30 days?	During the past 30 days, on how many days did you have at least 1 drink of alcohol?
Response:	Open-ended (i.e., number of days)	1. 0 2. 1–2 3. 3–5 4. 6–9 5. 10–19 6. 20–39 7. 40+	1. 0 2. 1 or 2 3. 3 to 5 4. 6 to 9 5. 10 to 19 6. 20 to 29 7. All 30 days
<b>Drinking Patterns</b>			
• Age at first consumption	How old were you the first time you had a drink of an alcoholic beverage?*	When (if ever) did you first...try an alcoholic beverage—more than just a few sips? (non-core dataset)	How old were you when you had your first drink of alcohol other than a few sips?
Response:	Open-ended (i.e., age in years)	1. Grade 4 or less (8th,10th graders) 2. Grade 5 (8th,10th graders) 3. Grade 6 4. Grade 7 5. Grade 8 6. Grade 9 7. Grade 10 8. Grade 11 (12th graders only) 9. Grade 12 (12th graders only) 10. Never	1. Never had a drink 2. 8 or younger 3. 9–10 4. 11–12 5. 13–14 6. 15–16 7. 17+

## Appendix A. Differences Among Survey Data Sources

ITEM	NHSDA/NSDUH	MTF	YRBS
• Frequency	During the past 30 days, on how many days did you drink 1 or more drinks of an alcoholic beverage?	On how many occasions (if any) have you had alcoholic beverages to drink—more than just a few sips—during the last 30 days?	During the past 30 days, on how many days did you have at least 1 drink of alcohol?
Response:	Open-ended (i.e., number of days)	<ol style="list-style-type: none"> <li>1. 0</li> <li>2. 1–2</li> <li>3. 3–5</li> <li>4. 6–9</li> <li>5. 10–19</li> <li>6. 20–39</li> <li>7. 40+</li> </ol>	<ol style="list-style-type: none"> <li>1. 0</li> <li>2. 1 or 2</li> <li>3. 3 to 5</li> <li>4. 6 to 9</li> <li>5. 10 to 19</li> <li>6. 20 to 29</li> <li>7. All 30 days</li> </ol>
• Quantity	On the [#] days that you drank during the past 30 days, how many drinks did you usually have each day? Count as a drink a can or bottle of beer; a wine cooler or a glass of wine, champagne, or sherry; a shot of liquor or a mixed drink or cocktail.		
Response:	Open-ended (i.e., number of drinks)		
• Volume	[Computation of frequency X quantity]		
• Binge Drinking	<p>Prior to 2015: During the past 30 days, that is, since ___, on how many days did you have 5 or more drinks on the same occasion? By “occasion,” we mean at the same time or within a couple of hours of each other.</p> <p>Beginning in 2015: During the past 30 days, that is since ___, on how many days did you have [4 or more]/[5 or more] drinks (for females/males, respectively) on the same occasion? By “occasion,” we mean at the same time or within a couple of hours of each other.</p>	Think back over the last 2 weeks. How many times have you had 5 or more drinks in a row?	<p>Prior to 2017: During the past 30 days, on how many days did you have 5 or more drinks of alcohol in a row, that is, within a couple of hours?</p> <p>Beginning in 2017: During the past 30 days, on how many days did you have 4 or more drinks of alcohol in a row (if you are female) or 5 or more drinks of alcohol in a row (if you are male)?</p>
Response:	Open-ended (i.e., number of days recorded)	<ol style="list-style-type: none"> <li>1. None</li> <li>2. Once</li> <li>3. Twice</li> <li>4. 3–5 times</li> <li>5. 6–9 times</li> <li>6. 10+ times</li> </ol>	<ol style="list-style-type: none"> <li>1. 0 days</li> <li>2. 1 day</li> <li>3. 2 days</li> <li>4. 3 to 5 days</li> <li>5. 6 to 9 days</li> <li>6. 10 to 19 days</li> <li>7. 20 or more days</li> </ol>
• Extreme Binge (High-Intensity) Drinking		<p>During the last 2 weeks, how many times (if any) have you had 10 or more drinks in a row? [12th grade only]</p> <p>During the last 2 weeks, how many times (if any) have you had 15 or more drinks in a row? [12th grade only]</p>	
Response:		<ol style="list-style-type: none"> <li>1. None</li> <li>2. Once</li> <li>3. Twice</li> <li>4. 3–5 times</li> <li>5. 6–9 times</li> <li>6. 10+ times</li> </ol>	

## Appendix A. Differences Among Survey Data Sources

ITEM	NHSDA/NSDUH	MTF	YRBS
• Drunkenness		On how many occasions (if any) have you been drunk or very high from drinking alcoholic beverages during the last 30 days?	
Response:		1. 0 occasions 2. 1–2 occasions 3. 3–5 occasions 4. 6–9 occasions 5. 10–19 occasions 6. 20–39 occasions 7. 40 or more occasions	
<b>Alcohol-Related Attitudes</b>			
• Attitude toward others drinking	How do you feel about someone your age having 1 or 2 drinks of an alcoholic beverage nearly every day?	Do you disapprove of people . . . taking 1 or 2 drinks nearly every day?	
Response:	1. Neither approve nor disapprove 2. Somewhat disapprove 3. Strongly disapprove	1. Don't disapprove 2. Disapprove 3. Strongly disapprove	
		Do you disapprove of people . . . having 5 or more drinks once or twice each weekend?	
Response:		1. Don't disapprove 2. Disapprove 3. Strongly disapprove	
• Perception of risk of drinking		How much do you think people risk harming themselves (physically or in other ways), if they take 1 or 2 drinks nearly every day?	
Response:		1. No risk 2. Slight risk 3. Moderate risk 4. Great risk 5. Can't say, drug unfamiliar	
	How much do people risk harming themselves physically and in other ways when they have 5 or more drinks of an alcoholic beverage once or twice a week?	How much do you think people risk harming themselves (physically or in other ways), if they have 5 or more drinks once or twice each weekend?	
Response:	1. No risk 2. Slight risk 3. Moderate risk 4. Great risk	1. No risk 2. Slight risk 3. Moderate risk 4. Great risk 5. Can't say, drug unfamiliar	
<b>Alcohol-Related Risk Behaviors</b>			
• Drinking and driving	During the past 12 months, have you driven a vehicle while you were under the influence of alcohol/alcohol only?	During the LAST 2 WEEKS, how many times have you driven a car, truck, or motorcycle after drinking alcohol? . . . having 5 or more drinks in a row? [12th graders]	During the past 30 days, how many times did you drive a car or other vehicle when you had been drinking alcohol?

### Appendix A. Differences Among Survey Data Sources

ITEM	NHSDA/NSDUH	MTF	YRBS
Response:	1. Yes 2. No 3. Never used	1. None 2. Once 3. Twice 4. 3–5 times 5. 6–9 times 6. 10 or more times	1. 0 times 2. 1 time 3. 2 or 3 times 4. 4 or 5 times 5. 6 or more times
		How many of these tickets or warnings [in the past 12 months] occurred after you were drinking alcoholic beverages? [12th graders]	
Response:		1. None 2. One 3. Two 4. 3–4 or more	
		How many of these accidents [in the past 12 months] occurred after you were drinking alcoholic beverages? [12th graders]	
Response:		1. None 2. One 3. Two 4. 3–4 or more	
		During the LAST 2 WEEKS, how many times (if any) have you been a passenger in a car . . . when the driver had been drinking alcoholic beverages?	During the past 30 days, how many times did you ride in a car or other vehicle driven by someone who had been drinking alcohol?
Response:		1. None 2. Once 3. Twice 4. 3 to 5 times 5. 6 to 9 times 6. 10 or more times	1. 0 times 2. 1 time 3. 2 or 3 times 4. 4 or 5 times 5. 6 or more times
• <i>Drinking and sexual activity</i>			Did you drink alcohol or use drugs before you had sexual intercourse the last time?
Response:			1. Never had sexual intercourse 2. Yes 3. No
• <i>Drinking and dangerous activities</i>	During the past 12 months, did you regularly drink alcohol and then do something where being drunk might have put you in physical danger?		
Response:	1. Yes 2. No 3. Never used		
• <i>Drinking and getting into trouble</i>	During the past 12 months, did drinking alcohol cause you to do things that repeatedly got you in trouble with the law?		

### Appendix A. Differences Among Survey Data Sources

ITEM	NHSDA/NSDUH	MTF	YRBS
Response:	1. Yes 2. No 3. Never used		
<i>• Drinking and problems with family/friends</i>	During the past 12 months, did you have any problems with family or friends that were probably caused by your drinking?		
Response:	1. Yes 2. No 3. Never used		

\*Asks respondents not to include times when only had a sip or two of alcohol.

NOTE: Shaded areas represent categories for which the survey does not have a comparable question.
